## General Comment

How is this a certificate of Compliance?

These amendments renders the licensing process useless.

You can't eliminate testing for such a critical situation relating to nuclear waste .

How can you make a standard less safe ?

Where are the scientists reviews and logical thinking process?

Amendment No. 1, Revision 1, also removes fabrication testing requirements for the thermal expansion coefficient and thermal conductivity which is wrong and there cannot be any reasons for doing this other than political lobbying.

Shame on America for giving in to money and greed.

Also, take care that 99% of Americans don't even know about this. If they knew, it would cause major revolutionary action. Be very careful NRC, you are taking lightly the lives of millions of people. Are you sure you want to reduce testing and increase risk factors for the general population?

What about restricting the circulation for cooling of the waste? Is anyone at NRC even reviewing these proposals before they go online ?

Exemptions are not acceptable on nuclear topics. Period.

Starting doing your homework before posting these unchecked and not acceptable proposals.

The American public is watching your actions. Be careful
