RE: NRC License 24-16607-03, Request to amend license

Ms. Bishop,

The current license (Amendment 8) allows for 100 microcuries of Cobalt-57, in any form, for possession incident to decommissioning of the facilities at 3500 Dekalb St, Saint Louis, Missouri. This amount was considered extremely conservative at the time of Amendment 8. No Cobalt-57 has ever been detected, and none is expected to be detected.

Therefore, I am requesting the possession limit be lowered to 50 microcuries, with the form and use unchanged. We feel that this remains a conservative possession level that will ensure we meet possession limits should we find some residual activity in the future.

Please contact me if you have concerns or questions regarding this amendment request.

Sincerely,

Thomas K Spencer
Radiation Safety Officer
