SUBJECT: VOGTLE ELECTRIC GENERATING PLANT – U.S. NUCLEAR REGULATORY
COMMISSION SECURITY INSPECTION REPORT 05000424/2015404 AND
05000425/2015404

Dear Mr. Taber:

On April 24, 2015, the U.S. Nuclear Regulatory Commission (NRC) completed a security baseline inspection at your Vogtle Electric Generating Plant, Units 1 and 2. The inspection covered one or more of the key attributes of the security cornerstone of the NRC's Reactor Oversight Process. The enclosed inspection report (IR) documents the inspection results that were discussed on April 24, 2015, with you and other members of your staff.

The inspection examined activities conducted under your license as they relate to security, compliance with the Commission's rules and regulations, and with the conditions of your license. The inspectors reviewed selected procedures and records, observed activities, and interviewed personnel.

This report documents one NRC-identified finding of very low security significance (i.e., Green, as determined by the Physical Protection Significance Determination Process) that was identified during this inspection. The deficiency was corrected or compensated for, and the plant was in compliance with applicable physical protection and security requirements within the scope of this inspection, before the inspectors left the site. The finding had a crosscutting aspect in the area Human Performance (H.2); in that, the licensee failed to observe and promptly correct deviation from standards and expectations. The NRC is treating this violation as a non-cited violation (NCV), consistent with Section 2.3.2.a of the Enforcement Policy.

If you contest this violation or significance of this NCV, you should provide a response within 30 days of the date of this IR with the basis of your denial, to the U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington DC 20555-0001; with copies to the
