## General Comment

I believe that the NRC should and must collect this information so things can be more standardized. It would enable all practices to be consistent and therefore ensuring patient safety as a priority.

I believe the burden estimate is as close to accurate as you can assume.

I am a strong believer in collecting data through an online website, such as this one. Respondents will find it easier to comply, accuracy of information will be higher and able to respond faster.

The completion of a worksheet formatted with yes/no or answers multiple choice would be the easier to compile the data but include a comment for each section. Sadly, those would have to be looked at individually.
