Dear Chairman Burns,

We write in consequence of the recent incident and fire at the Indian Point nuclear facility.

As you know NRC fire safety regulatory standards are contained in what is called Appendix R, which includes numerous particulars including those in III.G.2, requiring a 1-hour fire barrier for electric cables that control reactor shutdown.

As you may know, the Commission has granted numerous exemptions to the Appendix R at Indian Point, including but not limited to those affecting III. G.2.

Accordingly we ask for 1) a complete list of all exemptions to Appendix R fire safety regulations at Indian Point; 2) a Commission inquiry into whether such exemptions were implicated in the recent incident and fire; and a public meeting to discuss same.

Best wishes,

Richard Brodsky
