14

15

**Comment [JJ1]:** The draft date is for information only and is not part of the final rule or rule language.

**Comment [JJ2]:**  
**EDITORIAL NOTE 1:** ALL COMMENTS (SUCH AS THIS ONE) SHOWN IN THE RIGHT SIDE MARGIN OF THIS DOCUMENT ARE FOR INFORMATION PURPOSES ONLY TO PROVIDE ADDITIONAL INFORMATION AND TO AID THE READER IN UNDERSTANDING THE PROPOSED RULE DURING THE DRAFT REVIEW PROCESS. SINCE THIS IS A NEW RULE, MOST COMMENTS REFLECT CROSS-REFERENCE INFORMATION TO THE SUGGESTED STATE REGULATION AND NRC REGULATION.

THESE COMMENTS ARE **NOT** PART OF THE RULE AND ALL COMMENTS WILL BE DELETED PRIOR TO FINAL SUBMISSION.

**EDITORIAL NOTE 2:** THE ENTIRE RULE IS NOT PROVIDED/PRESENTED AS THE PROPOSED CHANGES IMPACT ONLY A LIMITED NUMBER OF SECTIONS. UNAFFECTED SECTIONS ARE OMITTED FROM THE DRAFT.

**Comment [JJ3]:** This reflects the date of anticipated approval by the Colorado Board of Health. The effective date is approximately 60 days beyond this date, pending additional review and approvals.

This date is subject to change as determined by the Board of Health. Changes to this date will be properly reflected in the rule, as applicable.

**Comment [JJ4]:** The language in brackets and subsequent "\*\*\*\*" marks are not part of the final rule and will be deleted prior to final submission.

16 **WASTE DISPOSAL**

17 **4.33 General Requirements.**

18 4.33.1 A licensee or registrant shall dispose of licensed or registered material only:

19 4.33.1.1 By transfer to an authorized recipient as provided in 4.38 or in Parts 3, 14, or 18  
20 of these regulations, or to the U.S. Department of Energy; or

21  
22 4.33.1.2 By decay in storage **in accordance with the following**; ~~or~~

23 **(1) A licensee may hold radioactive material with a physical half-life of less than or**  
24 **equal to 120 days for decay-in-storage before disposal without regard for its**  
25 **radioactivity if the licensee:**

26 **(a) Monitors radioactive material at the container surface before disposal**  
27 **and determines that its radioactivity cannot be distinguished from the**  
28 **background radiation level with a radiation detection survey instrument set**  
29 **on its most sensitive scale and with no interposed shielding; and**

30 **(b) Removes or obliterates all radiation labels, except for material that will**  
31 **be handled as biomedical waste after release;**

32 **or**

33 4.33.1.3 By release in effluents within the limits in 4.14; or

34 4.33.1.4 As authorized pursuant to 4.34, 4.35, 4.36, 4.37 or 4.39.2

35 4.33.2 A person shall be specifically licensed or registered to receive waste containing licensed or  
36 registered material from other persons for:

37 4.33.2.1 Treatment prior to disposal; or

38 4.33.2.2 Treatment or disposal by incineration; or

39 4.33.2.3 Decay in storage; or

40 4.33.2.4 Disposal at a land disposal facility pursuant to Part 14 of these regulations or as  
41 authorized under Parts 3 or 18 of these regulations; or

42 4.33.2.5 Storage until transferred to a storage or disposal facility authorized to receive the  
43 waste.

44

45

46

\* \* \*

47

**Comment [JJ5]:**

For consistency, the added language puts forth equivalent requirements (for all licensees) that are identical to the requirements contained in Part 7, Section 7.29 (which is only applicable to medical/healing arts licensees).

The proposed change is not required by NRC regulation but is necessary to address a programmatic need to ensure consistency between medical and non-medical licensees with respect to decay in storage.

48 **RECORDS**

49 **4.40 General Provisions.**

50 **4.40.1 Each person who receives source or radioactive material pursuant to a license issued**  
51 **pursuant to Part 3 shall keep records showing the receipt, transfer, and disposal of this**  
52 **radioactive material as follows:**

53 **4.40.1.1 The licensee shall retain each record of receipt of source or radioactive material**  
54 **as long as the material is possessed and for three years following transfer or**  
55 **disposition of the radioactive material.**

56 **4.40.1.2 The licensee who transferred the material shall retain each record of transfer of**  
57 **source or radioactive material until the Department terminates each license that**  
58 **authorizes the activity that is subject to the recordkeeping requirement.**

59 **4.40.1.3 The licensee shall retain each record of disposal of source or radioactive material**  
60 **until the Department terminates each license that authorizes the activity that is**  
61 **subject to the recordkeeping requirement.**

62 **4.40.1.4 If source or radioactive material is combined or mixed with other licensed**  
63 **material and subsequently treated in a manner that makes direct correlation of a**  
64 **receipt record with a transfer, export, or disposition record impossible, the**  
65 **licensee may use evaluative techniques (such as first-in-first-out), to make the**  
66 **records that are required by Part 4 account for 100 percent of the material**  
67 **received.**

68 **4.40.2 The licensee shall retain each record that is required by the regulations in this part or by**  
69 **license condition for the period specified by the appropriate regulation or license**  
70 **condition. If a retention period is not otherwise specified by regulation or license**  
71 **condition, each record must be maintained until the Department terminates the license**  
72 **that authorizes the activity that is subject to the recordkeeping requirement.**

73 **4.40.34 Each licensee or registrant shall use the SI units becquerel, gray, sievert and coulomb per**  
74 **kilogram, or the special units curie, rad, rem and roentgen, including multiples and subdivisions,**  
75 **and shall clearly indicate the units of all quantities on records required by Part 4.**

76 **4.40.42 The licensee or registrant shall make a clear distinction among the quantities entered on the**  
77 **records required by Part 4 (e.g., total effective dose equivalent, total organ dose equivalent,**  
78 **shallow dose equivalent, lens dose equivalent, deep dose equivalent, committed effective dose**  
79 **equivalent).**

80 **4.40.53 The licensee or registrant shall be consistent in their use of SI or special units. The licensee or**  
81 **registrant shall not change the units used on records required by Part 4 except at the beginning of**  
82 **the calendar year or with Department approval.**

**Comment [JJ6]:** Language of 4.40.1 added  
consistent with 10 CFR 40.61(a), and (b).

During the development of proposed changes to  
Part 3 ("Licensing of Radioactive Material") now  
underway, it was determined through a cross-  
reference that Colorado rules do not appear to  
have a provision equivalent to 10 CFR 40.61(a)  
or (b).

This added language was not previously  
identified in the Draft as provided/presented to  
the Colorado Board of Health on April 15, 2015.

NRC Compatibility = C  
SSRCR Equivalent = C.95

88 **4.48 Records of Waste Disposal.**

89 4.48.1 Each licensee or registrant shall maintain records of the disposal of licensed or registered  
90 materials made pursuant to 4.34, 4.35, 4.36, 4.37, Part 14 of these regulations, and disposal by  
91 burial in soil, including burials authorized before December 30, 1985.

92 4.48.2 The licensee or registrant shall retain the records required by 4.48.1 in accordance with 3.15.4  
93 until the Department terminates each pertinent license or registration requiring the record.

94 **4.48.3 For radioactive material disposed in accordance with 4.33.1.2, the licensee shall retain a**  
95 **record of each decay in storage disposal for 3 years. The record must include the date of**  
96 **the disposal, the survey instrument used, the background radiation level, the radiation**  
97 **level measured at the surface of each waste container, and the name of the individual who**  
98 **performed the survey.**

99

100

\* \* \*

101

102

**Comment [JJ7]:**

For consistency, the added language puts forth equivalent requirements (for all licensees) that are identical to the requirements contained in Part 7, Section 7.29 (which is only applicable to medical/healing arts licensees).

The proposed change is not required by NRC regulation but is necessary to address a programmatic need to ensure consistency between medical and non-medical licensees with respect to decay in storage disposal records.

103     **4.61     Radiological Criteria For License Termination.**

104 4.61.1 The criteria in this section apply to the decommissioning of facilities licensed under Parts 3, 5, 7,  
105 14, 16, and 19 of these regulations. For low-level waste disposal facilities licensed under Part 14,  
106 the criteria apply only to the ancillary surface facilities that support radioactive waste disposal  
107 activities.

108 4.61.1.1 The criteria in this section do not apply to uranium and thorium recovery facilities  
109 | already subject to Appendix 18A of Part 18; uranium solution extraction facilities; sites  
110 which have been decommissioned and the license terminated prior to July 1, 1999; or  
111 sites which submitted a decommissioning plan prior to July 1, 2000 and received  
112 Department approval of that decommissioning plan prior to July 1, 2001.

**Comment [JJ8]:**

This corrects a typographical cross-reference error. Currently, Appendix A of Part 18 is titled Appendix A, and not Appendix "18A".

113

114 \* \* \*

115

**PART 4, APPENDIX 4B: ANNUAL LIMITS ON INTAKE (ALI) AND DERIVED AIR CONCENTRATIONS (DAC) OF RADIONUCLIDES FOR OCCUPATIONAL EXPOSURE; EFFLUENT CONCENTRATIONS; CONCENTRATIONS FOR RELEASE TO SANITARY SEWERAGE**

~~**ANNUAL LIMITS ON INTAKE (ALI) AND DERIVED AIR CONCENTRATIONS (DAC) OF RADIONUCLIDES FOR OCCUPATIONAL EXPOSURE; EFFLUENT CONCENTRATIONS; CONCENTRATIONS FOR RELEASE TO SANITARY SEWERAGE**~~

**Comment [JJ9]:** A redundant (duplicative) section title is removed.

**Introduction**

For each radionuclide, Table 4B1 indicates the chemical form which is to be used for selecting the appropriate ALI or DAC value. The ALIs and DACs for inhalation are given for an aerosol with an activity median aerodynamic diameter (AMAD) of 1  $\mu\text{m}$ , micron, and for three classes (D, W, Y) of radioactive material, which refer to their retention (approximately days, weeks or years) in the pulmonary region of the lung. This classification applies to a range of clearance half times for D if less than 10 days, for W from 10 to 100 days, and for Y greater than 100 days. Table 4B2 provides concentration limits for airborne and liquid effluents released to the general environment. Table 4B3 provides concentration limits for discharges to sanitary sewerage.

**Note:**

The values in Table 4B1, Table 4B2, and Table 4B3 are presented in the computer "E" notation. In this notation a value of 6E-02 represents a value of  $6 \times 10^{-2}$  or 0.06, 6E+2 represents  $6 \times 10^2$  or 600, and 6E+0 represents  $6 \times 10^0$  or 6.

**Table 4B1 "Occupational Values"**

Note that the columns in Table 4B1 of this appendix captioned "Oral Ingestion ALI," "Inhalation ALI," and "DAC," are applicable to occupational exposure to radioactive material.

The ALIs in this appendix are the annual intakes of given radionuclide by "reference man" which would result in either (1) a committed effective dose equivalent of 0.05 Sv (5 rem), stochastic ALI, or (2) a committed dose equivalent of 0.5 Sv (50 rem) to an organ or tissue, non-stochastic ALI. The stochastic ALIs were derived to result in a risk, due to irradiation of organs and tissues, comparable to the risk associated with deep dose equivalent to the whole body of 0.05 Sv (5 rem). The derivation includes multiplying the committed dose equivalent to an organ or tissue by a weighting factor,  $w_T$ . This weighting factor is the proportion of the risk of stochastic effects resulting from irradiation of the organ or tissue,  $T$ , to the total risk of stochastic effects when the whole body is irradiated uniformly. The values of  $w_T$  are listed under the definition of weighting factor in 4.3. The non-stochastic ALIs were derived to avoid non-stochastic effects, such as prompt damage to tissue or reduction in organ function.

A value of  $w_T = 0.06$  is applicable to each of the five organs or tissues in the "remainder" category receiving the highest dose equivalents, and the dose equivalents of all other remaining tissues may be disregarded. The following portions of the GI tract — stomach, small intestine, upper large intestine, and lower large intestine — are to be treated as four separate organs.

Note that the dose equivalents for an extremity, skin and lens of the eye are not considered in computing the committed effective dose equivalent, but are subject to limits that must be met separately.

When an ALI is defined by the stochastic dose limit, this value alone is given. When an ALI is determined by the non-stochastic dose limit to an organ, the organ or tissue to which the limit applies is shown, and the ALI for the stochastic limit is shown in parentheses. Abbreviated organ or tissue designations are used:

159 LLI wall = lower large intestine wall;

160 St. wall = stomach wall;

161 Blad wall = bladder wall; and

162 Bone surf = bone surface.

163 The use of the ALIs listed first, the more limiting of the stochastic and non-stochastic ALIs, will ensure that  
164 non-stochastic effects are avoided and that the risk of stochastic effects is limited to an acceptably low  
165 value. If, in a particular situation involving a radionuclide for which the non-stochastic ALI is limiting, use  
166 of that non-stochastic ALI is considered unduly conservative, the licensee may use the stochastic ALI to  
167 determine the committed effective dose equivalent. However, the licensee shall also ensure that the 0.5  
168 Sv (50 rem) dose equivalent limit for any organ or tissue is not exceeded by the sum of the external deep  
169 dose equivalent plus the internal committed dose equivalent to that organ, not the effective dose. For the  
170 case where there is no external dose contribution, this would be demonstrated if the sum of the fractions  
171 of the nonstochastic ALIs ( $ALI_{ns}$ ) that contribute to the committed dose equivalent to the organ receiving  
172 the highest dose does not exceed unity, that is,  $\sum (\text{intake (in } \mu\text{Ci) of each radionuclide} / ALI_{ns}) \leq 1.0$ . If there  
173 is an external deep dose equivalent contribution of  $H_d$ , then this sum must be less than  $1 - (H_d/50)$ ,  
174 instead of  $\leq 1.0$ .

175 Note that the dose equivalents for an extremity, skin, and lens of the eye are not considered in computing  
176 the committed effective dose equivalent, but are subject to limits that must be met separately.

177 The derived air concentration (DAC) values are derived limits intended to control chronic occupational  
178 exposures. The relationship between the DAC and the ALI is given by:

179  $DAC = ALI \text{ (in } \mu\text{Ci)}/(2000 \text{ hours per working year} \times 60 \text{ minutes/hour} \times 2 \times 10^4 \text{ ml per minute}) = (ALI/2.4 \times$   
180  $10^9) \mu\text{Ci/ml}$ , where  $2 \times 10^4$  ml is the volume of air breathed per minute at work by reference man under  
181 working conditions of light work.

182 The DAC values relate to one of two modes of exposure: either external submersion or the internal  
183 committed dose equivalents resulting from inhalation of radioactive materials. DACs based upon  
184 submersion are for immersion in a semi-infinite cloud of uniform concentration and apply to each  
185 radionuclide separately.

186 The ALI and DAC values include contributions to exposure by the single radionuclide named and any in-  
187 growth of decay product radionuclides produced in the body by decay of the parent. However, intakes  
188 that include both the parent and decay product radionuclides should be treated by the general method  
189 appropriate for mixtures.

190 The values of ALI and DAC do not apply directly when the individual both ingests and inhales a  
191 radionuclide, when the individual is exposed to a mixture of radionuclides by either inhalation or ingestion  
192 or both, or when the individual is exposed to both internal and external irradiation. See 4.7. When an  
193 individual is exposed to radioactive materials which fall under several of the translocation classifications  
194 of the same radionuclide, such as, Class D, Class W, or Class Y, the exposure may be evaluated as if it  
195 were a mixture of different radionuclides.

196 It should be noted that the classification of a compound as Class D, W, or Y is based on the chemical  
197 form of the compound and does not take into account the radiological half-life of different radionuclides.  
198 For this reason, values are given for Class D, W, and Y compounds, even for very short-lived  
199 radionuclides.

200

201 **Table 4B2 “Effluent Concentrations”**

202 The columns in Table 4B2 of this appendix captioned “Effluents,” “Air” and “Water” are applicable to the  
203 assessment and control of dose to the public, particularly in the implementation of the provisions of 4.15.  
204 The concentration values given in Columns 1 and 2 of Table 4B2 are equivalent to the radionuclide  
205 concentrations which, if inhaled or ingested continuously over the course of a year, would produce a total  
206 effective dose equivalent of 0.5 mSv (0.05 rem).

207 Consideration of non-stochastic limits has not been included in deriving the air and water effluent  
208 concentration limits because non-stochastic effects are presumed not to occur at or below the dose levels  
209 established for individual members of the public. For radionuclides, where the non-stochastic limit was  
210 governing in deriving the occupational DAC, the stochastic ALI was used in deriving the corresponding  
211 airborne effluent limit in Table 4B2. For this reason, the DAC and airborne effluent limits are not always  
212 proportional as they were in Appendix A of Part D of the Eighth Edition of Volume I of the Suggested  
213 State Regulations for Control of Radiation, April 2004.

214 The air concentration values listed in Table 4B2, Column 1, were derived by one of two methods. For  
215 those radionuclides for which the stochastic limit is governing, the occupational stochastic inhalation ALI  
216 was divided by  $2.4 \times 10^9$ , relating the inhalation ALI to the DAC, as explained above, and then divided by  
217 a factor of 300. The factor of 300 includes the following components: a factor of 50 to relate the 0.05 Sv  
218 (5 rem) annual occupational dose limit to the 0.1 rem limit for members of the public, a factor of 3 to  
219 adjust for the difference in exposure time and the inhalation rate for a worker and that for members of the  
220 public; and a factor of 2 to adjust the occupational values, derived for adults, so that they are applicable to  
221 other age groups.

222 For those radionuclides for which submersion, that is external dose, is limiting, the occupational DAC in  
223 Table 4B1, Column 3 was divided by 219. The factor of 219 is composed of a factor of 50, as described  
224 above, and a factor of 4.38 relating occupational exposure for 2,000 hours per year to full-time exposure  
225 (8,760 hours per year). Note that an additional factor of 2 for age considerations is not warranted in the  
226 submersion case.

227 The water concentrations were derived by taking the most restrictive occupational stochastic oral  
228 ingestion ALI and dividing by  $7.3 \times 10^7$ . The factor of  $7.3 \times 10^7$  (ml) includes the following components: the  
229 factors of 50 and 2 described above and a factor of  $7.3 \times 10^5$  (ml) which is the annual water intake of  
230 reference man.

231 Note 2 of this appendix provides groupings of radionuclides which are applicable to unknown mixtures of  
232 radionuclides. These groupings, including occupational inhalation ALIs and DACs, air and water effluent  
233 concentrations and releases to sewer, require demonstrating that the most limiting radionuclides in  
234 successive classes are absent. The limit for the unknown mixture is defined when the presence of one of  
235 the listed radionuclides cannot be definitely excluded as being present either from knowledge of the  
236 radionuclide composition of the source or from actual measurements.

237 **Table 4B3 “Releases to Sewerage”**

238 The monthly average concentrations for release to sanitary sewerage are applicable to the provisions in  
239 4.35. The concentration values were derived by taking the most restrictive occupational stochastic oral  
240 ingestion ALI and dividing by  $7.3 \times 10^6$  (ml). The factor of  $7.3 \times 10^6$  (ml) is composed of a factor of  $7.3 \times$   
241  $10^5$  (ml), the annual water intake by reference man, and a factor of 10, such that the concentrations, if the  
242 sewage released by the licensee were the only source of water ingested by a reference man during a  
243 year, would result in a committed effective dose equivalent of 0.5 rem.

-	Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life less than 2 hours Submersion <sup>1</sup>		-	2E+2	1E-7	1E-9	-	-
-	Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life greater than 2 hour . . . .		-	2E-1	1E-10	1E-12	1E-8	1E-7
-	Any single radionuclide not listed above that decays by alpha emission or spontaneous fission, or any mixture for which either the identity or the concentration of any radionuclide in the mixture is not known		-	4E-4	2E-13	1E-15	2E-9	2E-8

			Table 4B1 Occupational Values			Table 4B2 Effluent Concentrations		Table 4B3 Releases to Sewers
			Col. 1	Col. 2	Col. 3	Col. 1	Col. 2	
			Oral Ingestion	Inhalation				Monthly Average Concentration (μCi/ml)
Atomic No.	Radionuclide	Class	ALI (μCi)	ALI (μCi)	DAC (μCi/ml)	Air (μCi/ml)	Water (μCi/ml)	

NOTE:

1. If the identity of each radionuclide in a mixture is known but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.
2. If the identity of each radionuclide in the mixture is not known, but it is known that certain radionuclides specified in this appendix are not present in the mixture, the inhalation ALI, DAC, and effluent and sewage concentrations for the mixture are the lowest values specified in this appendix for any radionuclide that is not known to be absent from the mixture; or

If it is known that Ac-227-D and Cm-250-W are not present

- 7E-4 3E-13 - - -

If, in addition, it is known that Ac-227-W,Y, Th-229-W,Y, Th-230-W, Th-232-W,Y, Pa-231-W,Y, Np-237-W, Pu-239-W, Pu-240-W, Pu-242-W, Am-241-W, Am-242m-W, Am-243-W, Cm-245-W, Cm-246-W, Cm-247-W, Cm-248-W, Bk-247-W, Cf-249-W, and Cf-251-W are not present

- 7E-3 3E-12 - - -

If, in addition, it is known that Sm-146-W, Sm-147-W, Gd-148-D,W, Gd-152-D,W, Th-228-W,Y, Th-230-Y, U-232-Y, U-233-Y, U-234-Y, U-235-Y, U-236-Y, U-238-Y, Np-236-W, Pu-236-W,Y, Pu-238-W,Y, Pu-239-Y, Pu-240-Y, Pu-242-Y, Pu-244-W,Y, Cm-243-W, Cm-244-W, Cf-248-W, Cf-249-Y, Cf-250-W,Y, Cf-251-Y, Cf-252-W,Y, and Cf-254-W,Y are not present

- 7E-2 3E-11 - - -

If, in addition, it is known that Pb-210-D, Bi-210m-W, Po-210-D,W, Ra-223-W, Ra-225-W, Ra-226-W, Ac-225-D,W,Y, Th-227-W,Y, U-230-D,W,Y, U-232-D,W, Pu-241-W, Cm-240-W, Cm-242-W, Cf-248-Y, Es-254-W, Fm-257-W, and Md-258-W are not present

- 7E-1 3E-10 - - -

If, in addition, it is known that Si-32-Y, Ti-44-Y, Fe-60-D, Sr-90-Y, Zr-93-D, Cd-113m-D, Cd-113-D, In-115-D,W, La-138-D, Lu-176-W, Hf-178m-D,W, Hf-182-D,W, Bi-210m-D, Ra-224-W, Ra-228-W, Ac-226-D,W,Y, Pa-230-W,Y, U-233-D,W, U-234-D,W, U-235-D,W, U-236-D,W, U-238-D,W, Pu-241-Y, Bk-249-W, Cf-253-W,Y, and Es-253-W are not present

If it is known that Ac-227-D,W,Y, Th-229-W,Y, Th-232-W,Y, Pa-231-W,Y, Cm-248-W, and Cm-250-W are not present			-	-	-	1E-14	-	-
If, in addition, it is known that Sm-146-W, Gd-148-D,W, Gd-152-D, Th-228-W,Y, Th-230-W,Y, U-232-Y, U-233-Y, U-234-Y, U-235-Y, U-236-Y, U-238-Y, U-Nat-Y, Np-236-W, Np-237-W, Pu-236-W,Y, Pu-238-W,Y, Pu-239-W,Y, Pu-240-W,Y, Pu-242-W,Y, Pu-244-W,Y, Am-241-W, Am-242m-W, Am-243-W, Cm-243-W, Cm-244-W, Cm-245-W, Cm-246-W, Cm-247-W, Bk-247-W, Cf-249-W,Y, Cf-250-W,Y, Cf-251-W,Y, Cf-252-W,Y, and Cf-254-W,Y are not present			-	-	-	1E-13	-	-
If, in addition, it is known that Sm-147-W, Gd-152-W, Pb-210-D, Bi-210m-W, Po-210-D,W, Ra-223-W, Ra-225-W, Ra-226-W, Ac-225-D,W,Y, Th-227-W,Y, U-230-D,W,Y, U-232-D,W, U-Nat-W, Pu-241-W, Cm-240-W, Cm-242-W, Cf-248-W,Y, Es-254-W, Fm-257-W, and Md-258-W are not present					-	1E-12	-	-
If, in addition it is known that Fe-60, Sr-90, Cd-113m, Cd-113, In-115, I-129, Cs-134, Sm-145, Sm-147, Gd-148, Gd-152, Hg-194 (organic), Bi-210m, Ra-223, Ra-224, Ra-225, Ac-225, Th-228, Th-230, U-233, U-234, U-235, U-236, U-238, U-Nat, Cm-242, Cf-248, Es-254, Fm-257, and Md-258 are not present-			-	-	-		1E-6	1E-5
3.	If a mixture of radionuclides consists of uranium and its daughters in ore dust (10 μm AMAD particle distribution assumed) prior to chemical separation of the uranium from the ore, the following values may be used for the DAC of the mixture: 6E-11 μCi of gross alpha activity from uranium-238, uranium-234, thorium-230, and radium-226 per milliliter of air; 3E-11 μCi of natural uranium per milliliter of air; or 45 micrograms of natural uranium per cubic meter of air.							
4.	If the identity and concentration of each radionuclide in a mixture are known, the limiting values should be derived as follows: determine, for each radionuclide in the mixture, the ratio between the concentration present in the mixture and the concentration otherwise established in Appendix B to 10 CFR 20.1001 - 20.2401 for the specific radionuclide when not in a mixture. The sum of such ratios for all of the radionuclides in the mixture may not exceed "1" (i.e., "unity").							
Example: If radionuclides "A," "B," and "C" are present in concentrations CA, CB, and CC, and if the applicable DACs are DAC <sub>A</sub> , DAC <sub>B</sub> , and DAC <sub>C</sub> , respectively, then the concentrations shall be limited so that the following relationship exists:								

$$\frac{C_A}{DAC_A} + \frac{C_B}{DAC_B} + \frac{C_C}{DAC_C} \leq 1$$

			Table 4B1 Occupational Values			Table 4B2 Effluent Concentrations		Table 4B3 Releases to Sewers
			Col. 1	Col. 2	Col. 3	Col. 1	Col. 2	
Atomic No.	Radionuclide	Class	Oral Ingestion	Inhalation		Air ( $\mu\text{Ci/ml}$ )	Water ( $\mu\text{Ci/ml}$ )	Monthly Average Concentration ( $\mu\text{Ci/ml}$ )
			ALI ( $\mu\text{Ci}$ )	ALI ( $\mu\text{Ci}$ )	DAC ( $\mu\text{Ci/ml}$ )			

FOOTNOTES:

<sup>1</sup>"Submersion" means that values given are for submersion in a hemispherical semi-infinite cloud of airborne material.

<sup>2</sup>These radionuclides have radiological half-lives of less than 2 hours. The total effective dose equivalent received during operations with these radionuclides might include a significant contribution from external exposure. The DAC values for all radionuclides, other than those designated Class "Submersion," are based upon the committed effective dose equivalent due to the intake of the radionuclide into the body and do NOT include potentially significant contributions to dose equivalent from external exposures. The licensee may substitute  $1\text{E-}7 \mu\text{Ci/ml}$  for the listed DAC to account for the submersion dose prospectively, but should use individual monitoring devices or other radiation measuring instruments that measure external exposure to demonstrate compliance with the limits. (See ' 20.1203.)

<sup>3</sup>For soluble mixtures of U-238, U-234, and U-235 in air, chemical toxicity may be the limiting factor (see ' 20.1201(e)). If the percent by weight (enrichment) of U-235 is not greater than 5, the concentration value for a 40-hour workweek is 0.2 milligrams uranium per cubic meter of air average. For any enrichment, the product of the average concentration and time of exposure during a 40-hour workweek shall not exceed  $8\text{E-}3 \text{ (SA)} \mu\text{Ci-hr/ml}$ , where SA is the specific activity of the uranium inhaled. The specific activity for natural uranium is  $6.77\text{E-}7$  curies per gram U. The specific activity for other mixtures of U-238, U-235, and U-234, if not known, shall be:

$$\text{SA} = 3.6\text{E-}7 \text{ curies/gram U} \quad \text{U-depleted}$$

$$\text{SA} = [0.4 + 0.38 (\text{enrichment}) + 0.0034 (\text{enrichment})^2] \text{E-}6, \text{ enrichment} \geq 0.72$$

where enrichment is the percentage by weight of U-235, expressed as percent.

PART 4, APPENDIX 4C: QUANTITIES OF LICENSED OR REGISTERED MATERIAL  
REQUIRING LABELING

248

QUANTITIES<sup>j</sup> OF LICENSED OR REGISTERED MATERIAL REQUIRING LABELING

249

\* To convert  $\mu\text{Ci}$  to  $\text{kBq}$ , multiply the  $\mu\text{Ci}$  value by 37.

**Comment [JJ11]:** Due to a past typographical error in the spelling of the isotope “Gadolinium” in Table 4C and the complexity of formatting a single page, the Table 4C will be replaced in its entirety.

There are no changes to the table numerical values or isotopes in the table.

**Comment [JJ12]:** The revised table contains this information at the top of each table page.

Comment [JJ13]:

This new table will replace Table 4C in its entirety to correct the typographical error with the isotope "Gadolinium".

In Draft 1 of the proposed rule amendment, this version of the table was originally proposed as a replacement table, but was found to have alignment and sequence issues. Instead, a table provided by NRC (below) will be used. The table below is equivalent to the table found in Appendix C of 10 CFR Part 20.

Fermium-255	Fm-255	1
Fermium-257	Fm-257	0.01
Mendelevium-257	Md-257	10
Mendelevium-258	Md-258	0.01
Any radionuclide other than alpha emitter radionuclides not listed above, or mixtures of beta emitters of unknown composition		0.01

**Comment [JJ15]:** This table is equivalent to Appendix C of 10 CFR 20.

Data is listed in order of Atomic Number rather than in alphabetic order.

268

269 Note: For purposes of 4.28.5, 4.31.1, and 4.51.1, where there is involved a combination of radionuclides  
270 in known amounts, the limit for the combination shall be derived as follows: determine, for each  
271 radionuclide in the combination, the ratio between the quantity present in the combination and the limit  
272 otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all  
273 radionuclides in the combination may not exceed "1" - that is, unity.

274 j The quantities listed above were derived by taking 1/10th of the most restrictive ALI listed in Table 4B1, Columns 1 and 2, of  
275 Appendix 4B, rounding to the nearest factor of 10, and constraining the values listed between 37 Bq and 37 MBq (0.001 and 1,000  
276 μCi). Values of 3.7 MBq (100 μCi) have been assigned for radionuclides having a radioactive half-life in excess of E+9 years, except  
277 Rhenium, 37 MBq (1,000 μCi), to take into account their low specific activity.

278
