*Environmental Noise Control*

October 30, 2012

Rare Element Resources  
225 Union Blvd, Suite 250  
Lakewood, CO 80228

Attention: Paul D. Bergstrom, C.E.P. - Director of Environmental Health & Safety

Subject: Bull Hill Mine and Upton Plant Site Noise Evaluation

Dear Mr. Bergstrom:

The following report describes the Bull Hill Mine and Upton Plant Site noise evaluation study consisting of 16 different monitoring locations recording the ambient sound levels for a total of 24 consecutive hours. The logged sound level data measurements range from Thursday, October 4, to Friday, October 5, 2012, to measure and document the ambient sound levels. The following report documents our findings and establishes the hourly average sound levels as well as the 24-hour ambient sound levels at each monitoring location.

## **Site Location and Conditions**

The proposed Upton Plant Site is located off of Buffalo Creek Road approximately half a mile southwest of U.S. Highway 16 in Upton, Wyoming. Measurement Locations 1 through 4 are identified in Attachment 1 located south and southwest of Highway 16 and northwest of Highway 116 near Upton. Location 1 was at the nearest residential property to the site.

The proposed Bull Hill Mine is located approximately 7 miles north of the town of Sundance, Wyoming. Measurement Locations 5 through 8 were within the mine's permit boundary and are identified in Attachment 2. These locations are located north and east of County Road 100. Measurement locations 9 through 16 are identified in Attachment 3 and are located off Sundance-Miller Creek Road and Sundance-Warren Peak County Road. Location 9 was at Reuter Camp Ground. Locations 10 through 16 were placed near to residences on the two roads. The measurements near residences were located at within the road right-of-way as close as possible to the property line of the residences.

## **Sound Measurement Instrumentation**

A total of 3 different models of Type I and II sound level meters were used for the survey, Bruel & Kjaer 2250 and 2238 Integrating and Logging Sound Level Meters and Quest Technologies DL-2 Logging Sound Level Meters. The meters were programmed, calibrated, and deployed for duration of 24-hours. The metering systems were installed approximately 5 feet above ground level.

Page 2

## Measurement Results

Attachments 4 through 19 display the measured hourly average sound levels along with the 24-hour average sound level. The tabulated data for locations 1 through 16 are identified in Attachments 20 through 23.

## Weather Conditions

Review of the weather conditions during the ambient monitoring period revealed winds on Thursday, October 4, 2012 and Friday, October 5, 2012 ranging from calm to 17 mph with light snow recorded on Friday. The measured weather conditions as stated by [www.wunderground.com](http://www.wunderground.com) for Casper, Wyoming are located on Attachment 24 through 26.

Please contact me if you have any questions or comments.

Very truly yours,

Bradley Webb  
Acoustical Superintendent
