General Comment

Building additional reactor units at Turkey point is a really bad idea.

No matter how safe those who profit say they are, a Fukushima type accident or terrorist attack could render most of South Florida uninhabitable.

Nuclear power is touted as a greenhouse solution, but the ancillary inputs to the nuclear fuel cycle such as mining, milling, reactor vessel construction, dealing with the waste that remains radioactive for millions of years, etc. negates any greenhouse mitigation.

Nuclear is an outmoded power source that would be economically non viable without massive subsidies.

We need to be developing Solar and other forms of renewable energy.

Please say NO to Turkey Point 6 & 7.
