Hello,

Please find a comment from a Miami resident on the draft EIS below.

Thank you.

Matthew Haber,
Assistant City Attorney
The City of Miami
T: 305-416-1837
F: 305-416-1801

Subject: NUREG-2176 High voltage lines through Roads Neighborhood

My name is Maria Cristina de Armas. I have owned and lived at 1895 South Miami Avenue for the last forty years, the very neighborhood through which FPL plans to place its oversized dangerous high voltage lines. My objection is based on the following points:

1. The integrity of the drinking water for South Florida will be affected as FPL would use this same water to cool its power plants thereby affecting the level of salt intrusion into the Biscayne Aquifer, the main source of drinking water for this area. I find it totally unacceptable that FPL also plans to curtail its current monitoring program for this.
2. While I can see that our area may in the future need more electricity, right now there is no current or foreseeable crisis that exists. A better thought out and ecologically sensitive plan to obtain more electricity should be planned to include but not be limited to solar, wind, water currents, etc.
3. Placing high voltage poles in a historically significant neighborhood such as the Miami Roads or South Miami Avenue Association is not the best of ideas. The placement of these poles in areas where they would cause less impact and where they would synchronize better with presently existing criteria governing their placement.
4. The hazards of 100 foot high electric poles within 50 feet of our homes where hurricanes or tornados could cause massive damage to both life and property by toppling onto roofs and causing fires.
5. The health and well being of individuals, as well as the people who traverse the area regularly on bikes or on foot, including children who live close to these proposed lines, is a real cancer concern. Whether or not you choose to acknowledge this danger, keep in mind that such has not

been negated by any study I have read and it is always better to err towards caution. Should these lines be placed in the neighborhood, they should be buried underground to a level that will not pose a threat to those traversing the area or to the neighborhood.

6. Home values will be definitely affected with the close proximity of these proposed lines. For these reasons, I respectfully ask that you consider not confirming FPL's request to build new nuclear reactors and certainly not to allow the placement of high voltage lines in the Miami Roads Neighborhood.

Very truly yours,
Maria Cristina de Armas
1895 South Miami Avenue
Miami Florida 33129-1512
