Subject: FPL new nuclear Plant

I am writing today from my home to oppose the approval of FPL's two new nuclear power plant at Turkey Point for the following reasons:

1. This location is too vulnerable to storm surges in a hurricane prone location. Sea level rise is not a fantasy and will subject Turkey Point to serious damage as well as costly preventative measures.
2. The present plant and the new proposed plant use millions of gallons of fresh water and water from Biscayne Bay, ignoring the damage that will occur to the Everglades, Biscayne National Park and South Dade well fields.
3. Conservation is by far less costly and productive as is being demonstrated by South Dade Farmers in water conservation with the use of drop irrigation and the use of compost and mulch that hold water and require less irrigation. All energy conservation measures must be implemented now, not more costly nuclear power. Utilize and subsidize more solar power that is making great strides towards becoming more affordable every year. We advertise on our license plates that Florida Is The Sunshine State yet present laws restrict the use of our ever-present Sun to be used for power. We must not commit ourselves to this new nuclear power for 60 years when clean solar energy is being wasted as it is showered over us every day.
4. My family has stock in FPL and we are against spending the \$20 million on old technology that will be paid for by its customers. As a stock holder, we would prefer that FPL use whatever financial resources are necessary to get our lawmakers in Tallahassee to make solar energy available to every household and commercial building with the latest technology in batteries that can make solar power available 24 hours a day.

I respectfully request that the US Nuclear Regulatory Commission deny FPL's request for two new nuclear reactors at Turkey Point.

P.S. I am writing as a citizen of Florida for 91 years. I work as the Administrator of the South Dade Soil and Water Conservation District and am very familiar with South Dade Agriculture and the surrounding area. I worked after Hurricane Andrew to obtain FEMA funding for the mulching of yard waste instead of burning it. We had had largest mulching operation in the US on top of the South Dade Landfill that produced 5.5 million cubic yards of free mulch (enough to fill a line of dump trucks from Homestead to Atlanta) that we delivered free of charge to local farmers. FEMA said that it was the most cost-effective disaster relief program they ever had. I am the founder of the City of Doral, Florida and am affectionately known as "The Father Of Doral"
