Subject: Turkey Point nuclear reactor

Hello,

I would like to voice my complete opposition to this project. This type of energy production should be outlawed. We are still dealing with disposal issues. This waste lasts for centuries. Where will it be stored? The Florida climate is not safe for this reactor. Hurricane's, tropical storms, sea level changes, etc. According to scientific research, the area could be below sea level in less than 30 years.

With an abundance of sunshine, our first and best alternative for energy production should be solar. It's time the public be given a chance to install affordable, dependable solar equipment. Allow tax credits to everyone who can help lower our usage of depleting the worlds reserves. Stop acting in the best interests of what is good for business.

We should also be harnessing the ocean currents for hydro electric power. Burning fossil fuels, and creating nuclear waste have been proven to be detrimental to our "mother earth". It's time we use our ingenuity as mankind to create sustainable and safe energy production. We only have one earth, one planet. It has to last for many generations to come.

Sincerely,

Randy Grant
