We live in the "Sunshine State" but FPL's commitment to renewable energy has been very weak. FPL under-performs on solar power, generating less than 1/10 of 1% (0.01%) of its electricity through solar power. Given that solar power helps meet peak demand, and power plants are built to meet peak demand, meaningful investment in solar would be a step in the correct direction and defer the need for the proposed Turkey Point nuclear reactors, which are very expensive, take a very long time to construct, increase greenhouse gases during construction and are very detrimental to ratepayers.
