Subject: No to the Two Nuclear Reactors

There is no logical reason for building these two nuclear reactors. Just look at the recent nuclear reactor disaster in Japan. Another in a series of nuclear disasters without end, the consequences of which are still being felt, still happening.

Now is the time to think about the damage that is caused with this type of energy and the impact it will have on future generations. Will Miami become the next Fukushima? Will south Florida become a radioactive wasteland?

To allow this to happen is a disaster, the risk is criminal. There are other choices for clean, safe energy, without dangerous toxic waste that will be present for years.

Do not allow this travesty. Say no to the new nuclear reactors. Say yes to solar energy Jaime

Jaime Duran P.
