NRC Regulation of Ground Water at ISR Wellfields

NRC Objective: Protect the public health, safety and the environment

To prevent contamination of ground water at ISR wellfields, NRC regulates source and 11e(2) byproduct fluids to ensure the licensee:

- **Characterizes, Sites and Designs ISR wellfields to ensure conditions are adequate to contain source and byproduct fluids within the wellfield**
- **Establishes background water quality to determine the ground water protection standards (GWPS) for the ore zone , overlying and underlying aquifers**
- **Operates ISR wellfields so that all source and byproduct fluids are contained within the wellfield**
- **Monitors ISR wellfields so that any ground water contamination outside wellfield from source and byproduct fluids is detected and corrected.**
- **Restores ISR wellfields to approved ground water protection standards (GWPS) and demonstrates the restored water quality is stable.**

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

What are the GWPS that must be established before operation and met after restoration of an ISR wellfield?

NRC Regulatory Information Summary RIS 90-05.

Licensees and applicants must commit to achieve the ground water quality standards in 10 CFR Part 40, Appendix A Criterion 5B (5) for all restored aquifers which conforms to the standards promulgated by EPA in 40 CFR Part 192 Subpart D 192.32 (2).

These standards state the concentration of a hazardous constituent (Criterion 13) must not exceed :

(a) the Commission approved background concentration of that constituent in ground water;

(b) the respective value in the table in paragraph 5C if the constituent is listed in the table and if the background level of the constituent is below the value listed or;

(c) an alternative concentration limit established by the Commission.

Protecting People and the Environment

I. ISR Wellfield Background Ground Water Quality Collection

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

What ground water quality is collected in the ISR wellfield?

- The background water quality of all constituents of concern (COC) in the ore zone aquifer and ore zone perimeter ring monitoring wells in the ISR wellfield.
- The background water quality of all constituents of concern (COC) in the overlying and underlying aquifers in the ISR wellfields.

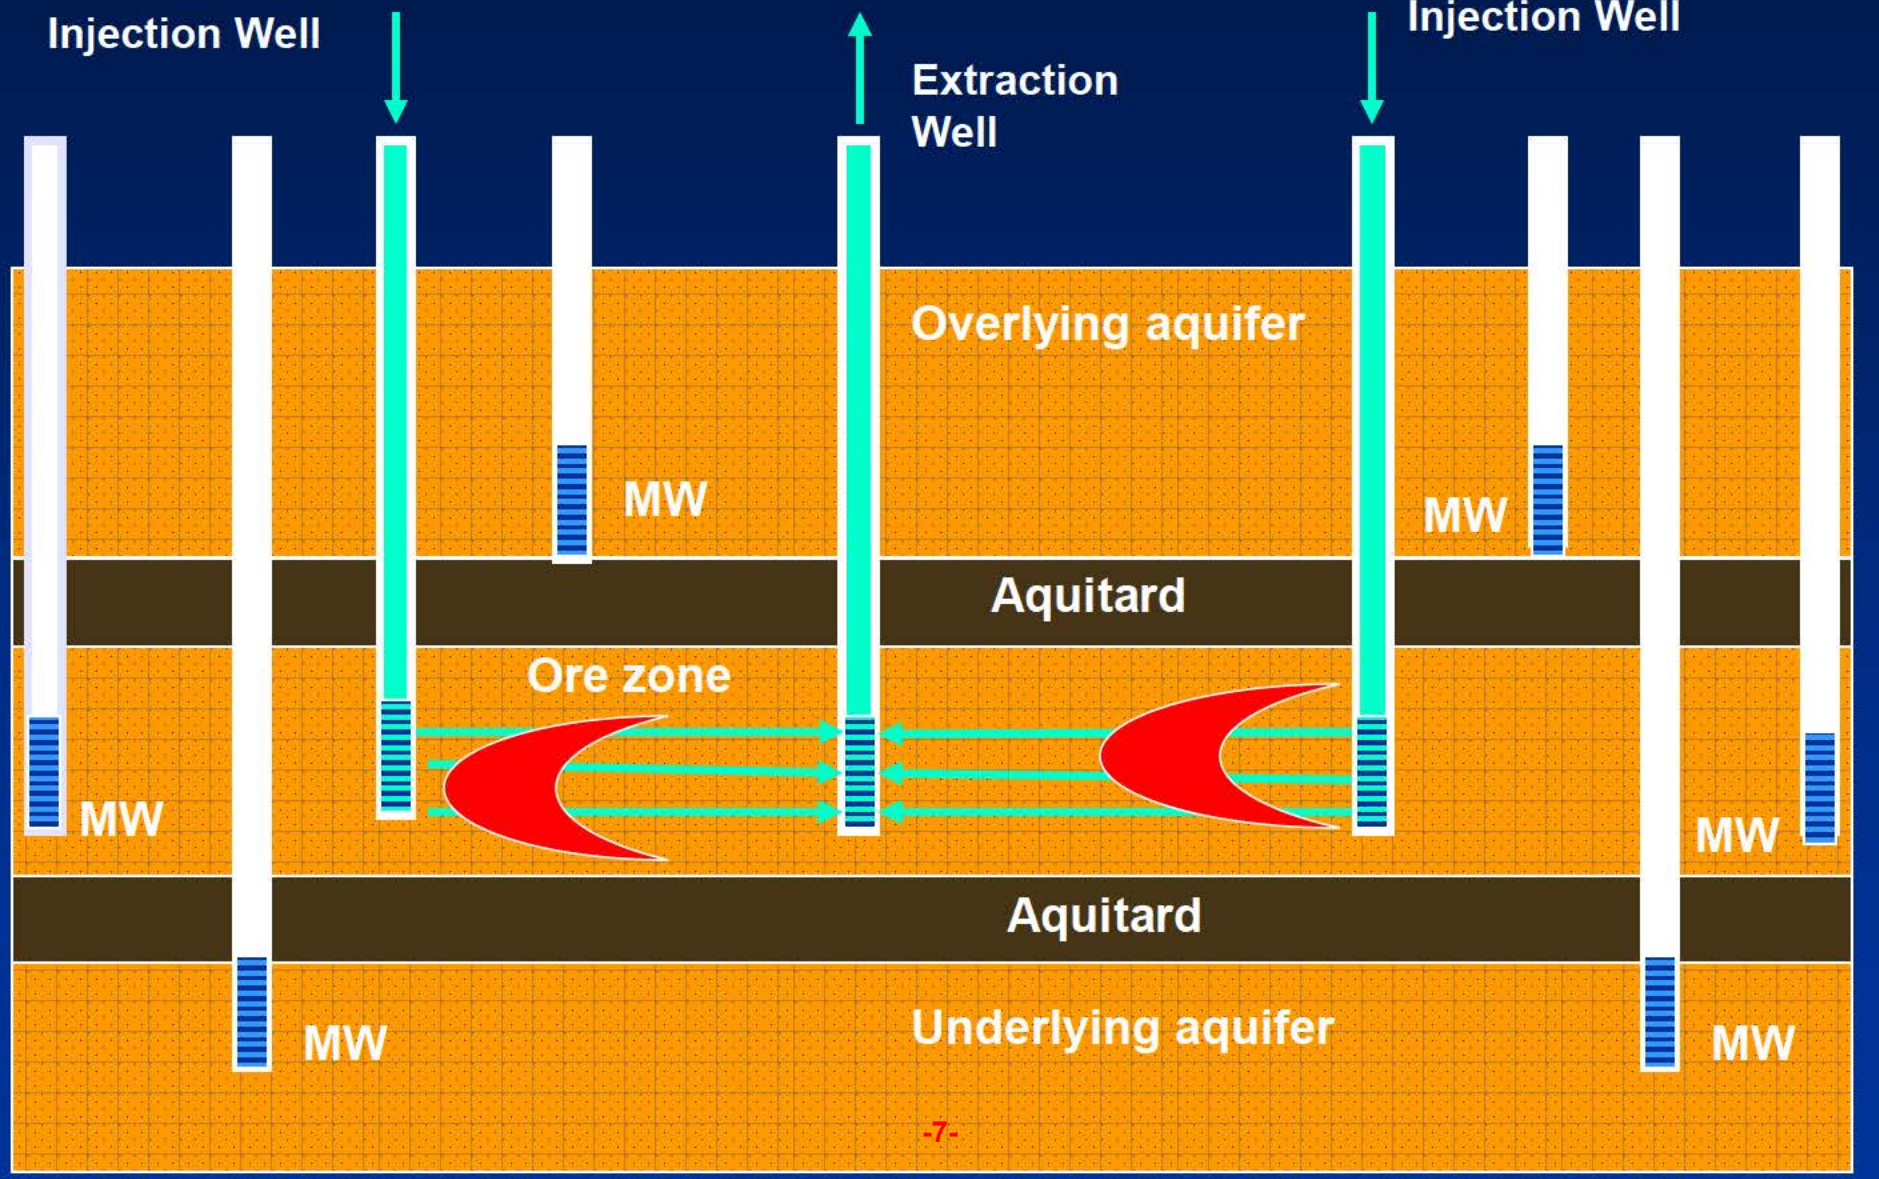
U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

Where is the ground water quality collected before operation of an ISR wellfield?

Example of ISR Wellfield

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

ISR Extraction, Injection and Overlying, Underlying and Perimeter Monitoring Wells



U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

How many samples are collected to assess the background ground water quality in an ISR wellfield?

- Production Ore Zone Aquifer (s) - 4 samples/well, at least 2 weeks apart
- Perimeter Monitoring Ring Wells- 4 samples/well, at least 2 weeks apart
- Overlying Aquifer(s) - 4 samples/well, at least 2 weeks apart
- Underlying Aquifer(s) –4 samples/well, at least 2 weeks apart
- Example: For a forty acre ISR wellfield, the production ore zone aquifer would have 40 samples for each parameter (1 well/4 acres basis).

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

What parameters are measured to establish the background ground water quality in an ISR wellfield?

Typically measure NUREG- 1569 Table 2.7.3-1 parameters in each sample, unless non-detect in first two samples

Table 2.7.3-1. Typical Baseline Water Quality Indicators to be Determined During Pre-operational Data Collection		
A. Trace and Minor Elements		
Arsenic	Iron	Selenium
Barium	Lead	Silver
Boron	Manganese	Uranium
Cadmium	Mercury	Vanadium
Chromium	Molybdenum	Zinc
Copper	Nickel	
Fluoride	Radium-226@	
B. Common Constituents		
Alkalinity	Chloride	Sodium
Bicarbonate	Magnesium	Sulfate
Calcium	Nitrate	
Carbonate	Potassium	
C. Physical Indicators		
Specific Conductivity*		Total Dissolved Solids#
pH*		
D. Radiological Parameters		
Gross Alpha†	Gross Beta	

*Field and Laboratory determination.
#Laboratory only.
†Excluding radon, radium, and uranium.
@ If site initial sampling indicates the presence of Th-232 then Ra-228 should be considered in the base line sampling or an alternative may be proposed.

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

II. Statistical Analysis of ISR Wellfield Water Quality

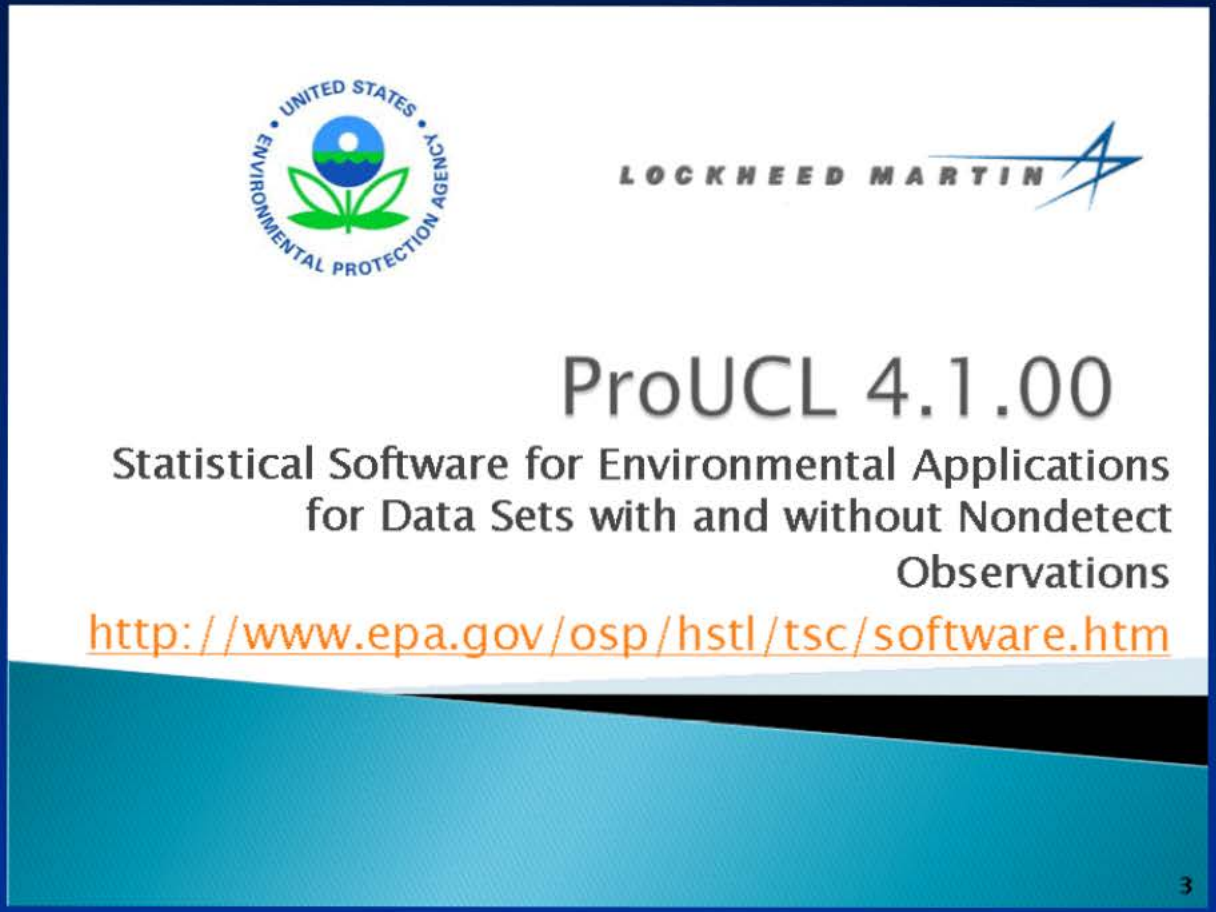
U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

How should the ISR wellfield water quality be analyzed?

- Apply appropriate statistics to ground water quality measurements
  - Graphical analysis of data distribution to assess if water quality parameter is from same population in a wellfield or different water zones (different sample populations).
  - Graphical and other tests for same population and outlier determination
  - General statistics- mean, median, standard deviation, etc.
  - Goodness of Fit (GOF) tests to select appropriate probability distribution
  - Upper Tolerance Limits (UTLs) and upper percentiles
  - Upper Confidence Limits (UCLs) of the Mean
- Accepted statistical methods can be found in EPA-530-R-09-007, "Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities: Unified Guidance," March 2009.

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

What software applications are useful for statistical analysis of ISR wellfield ground water quality?



Free Download ProUCL 4.1 (http://www.epa.gov/osp/hstl/tsc/software.htm),

Free Webinar Training can be found at http://www.clu-in.org/conf/tio/ProUCLBasic_030911/prez/1280x1024/ppframe.cfm?date=504&simul=1

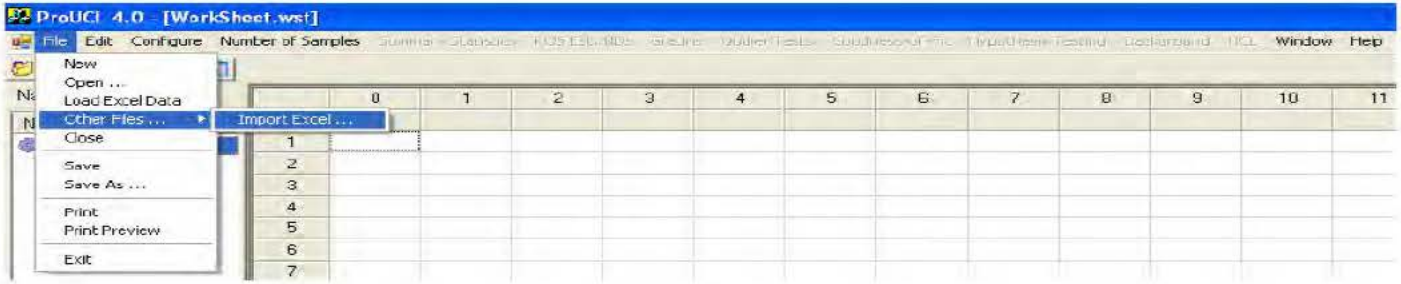
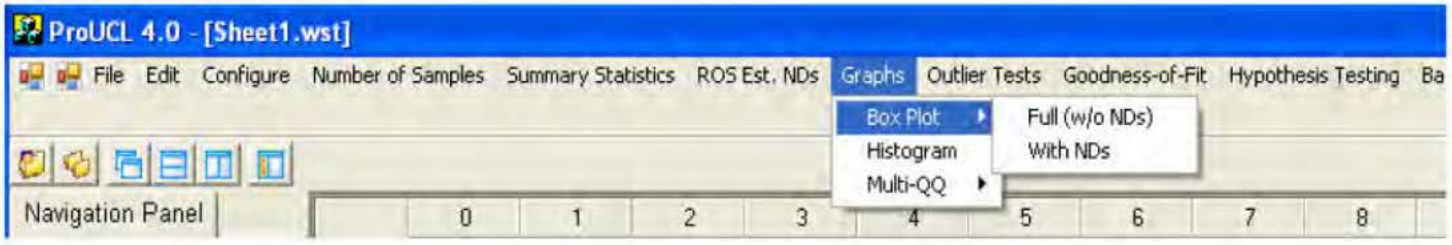
ProUCL 4.1 Features
User Friendly Spreadsheet Interface

Import Excel files (Excel 2003 *.xls format) and export output files

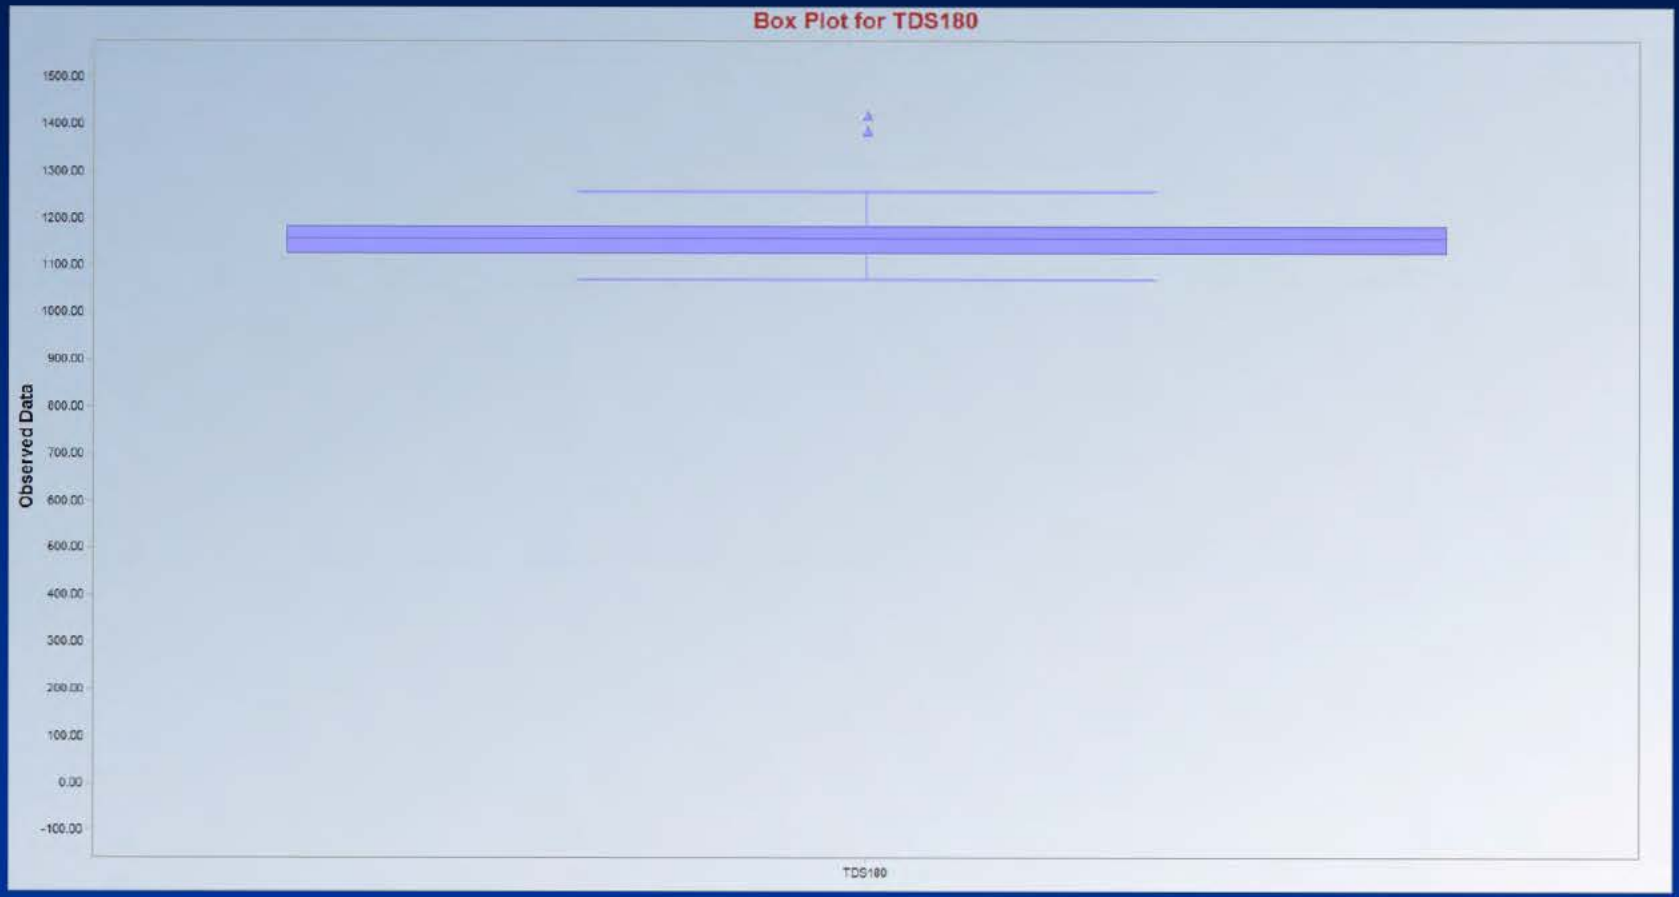


Spreadsheet pull-down menus to perform statistical analyses



U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

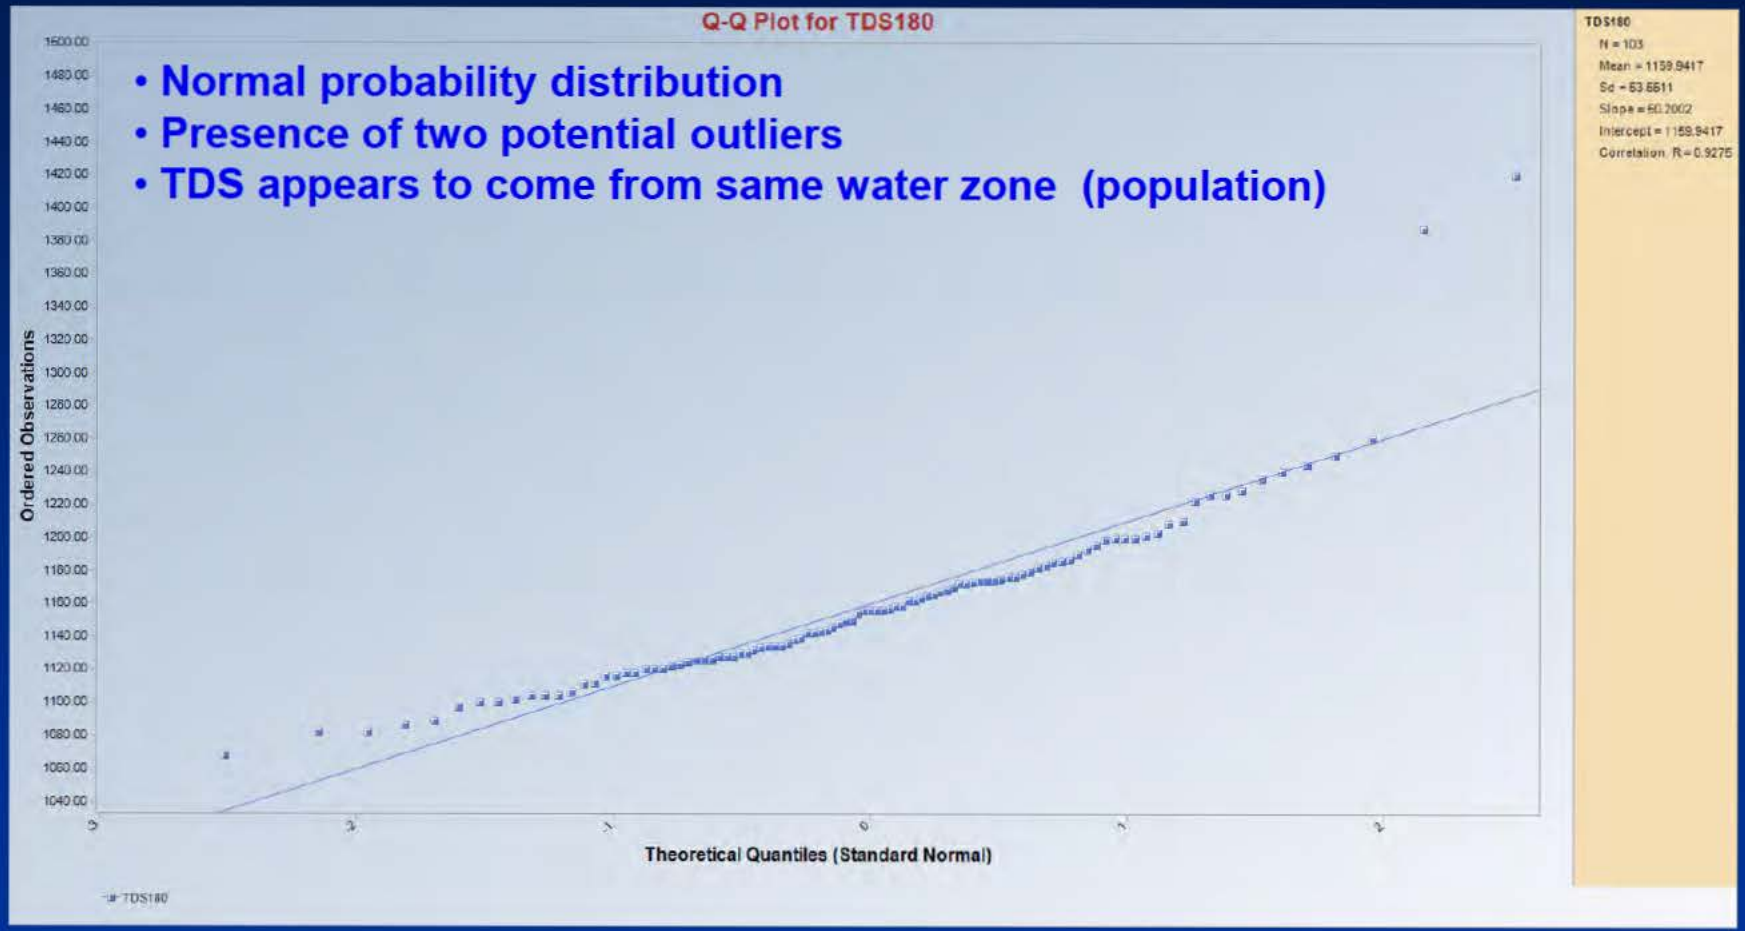
Pro UCL 4.1 Example
ISR Wellfield Ore Zone TDS data set
Box plot to demonstrate distribution, median and presence of outliers



- Apparent normal probability distribution
- Presence of two potential outliers
- TDS appears to come from same water zone (population)

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

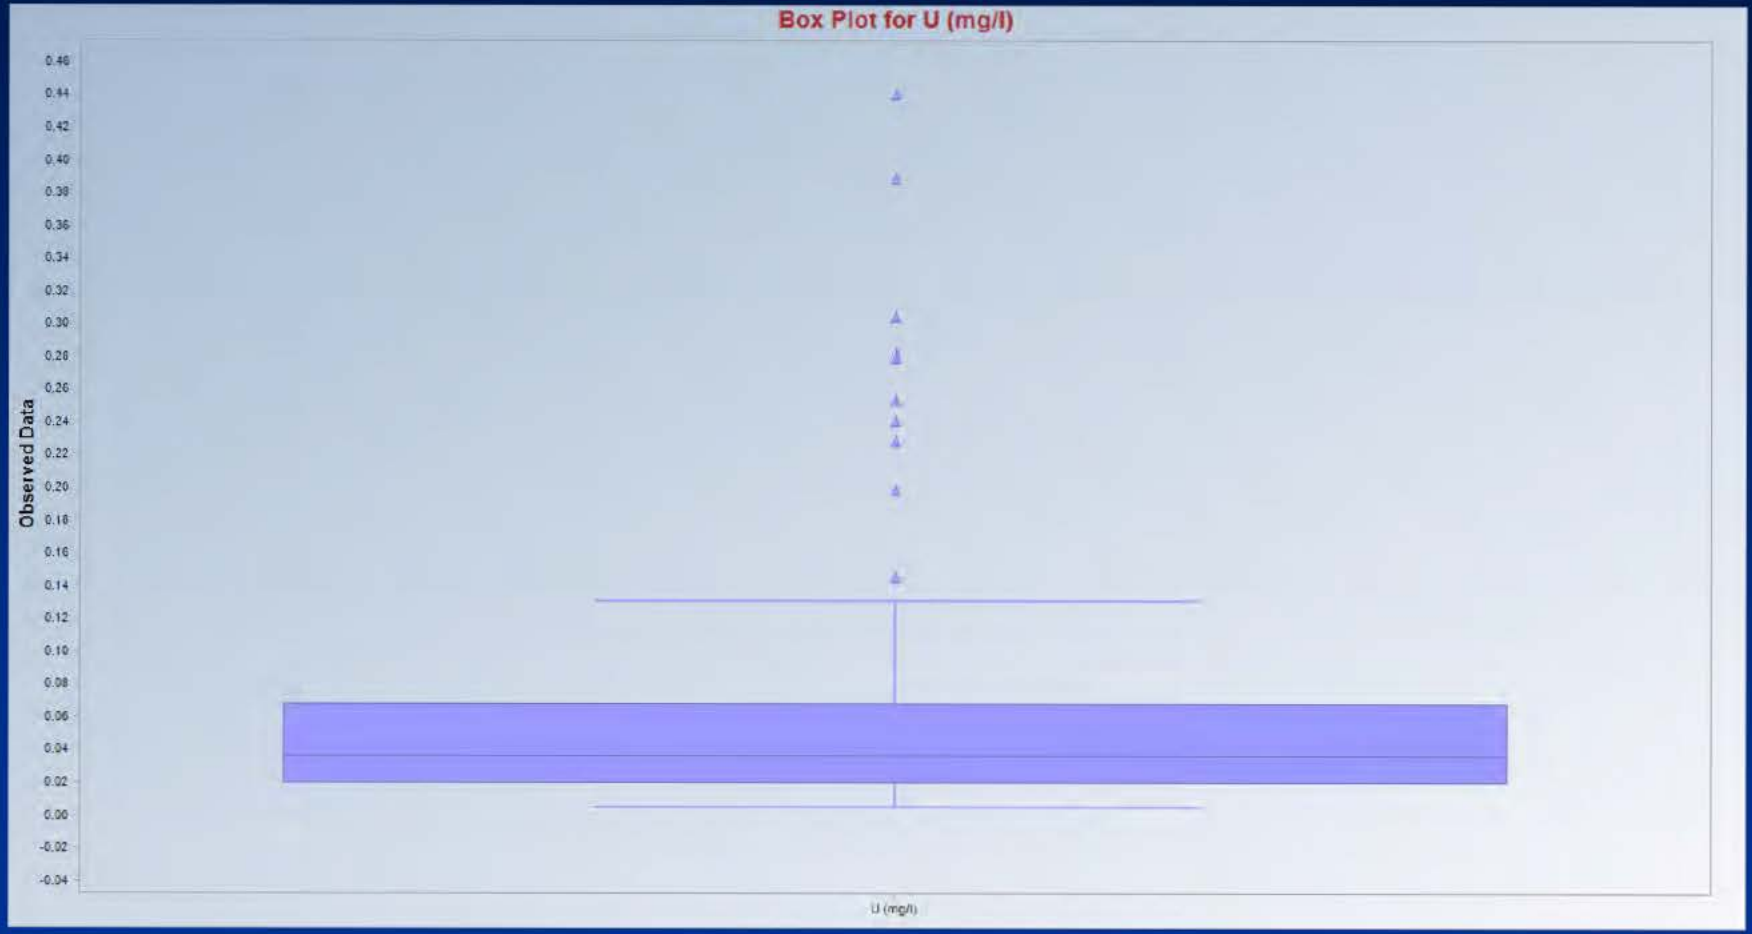
ProUCL 4.1 Example
ISR Wellfield Ore Zone TDS data set
QQ plot to demonstrate probability distribution and presence of outliers



Conclusion - can use normal probability distribution to evaluate outliers, mean , standard deviation, etc. for ISR wellfield TDS

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

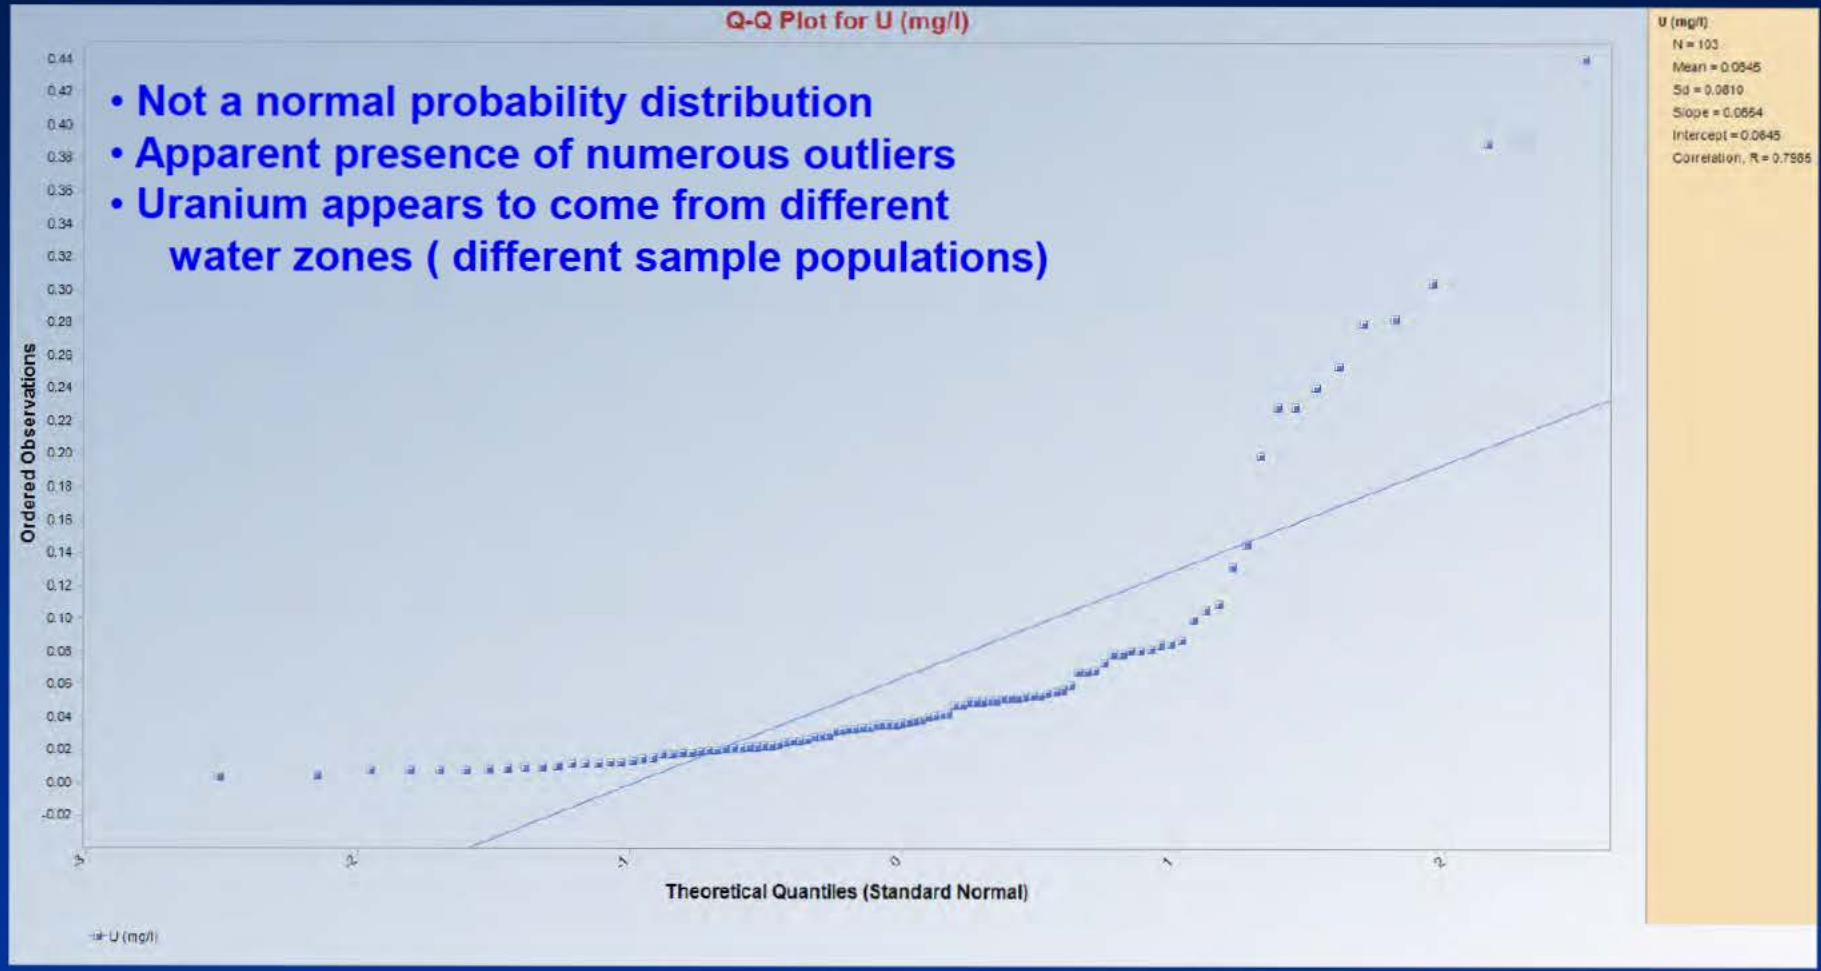
ProUCL 4.1 Example
ISR Wellfield Ore Zone Uranium data set
Box Plot for uranium distribution and outliers



- Uranium data do not appear to follow a normal distribution - data skewed
- Appear to be numerous potential outliers
- Appear to have different water zones (populations)

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

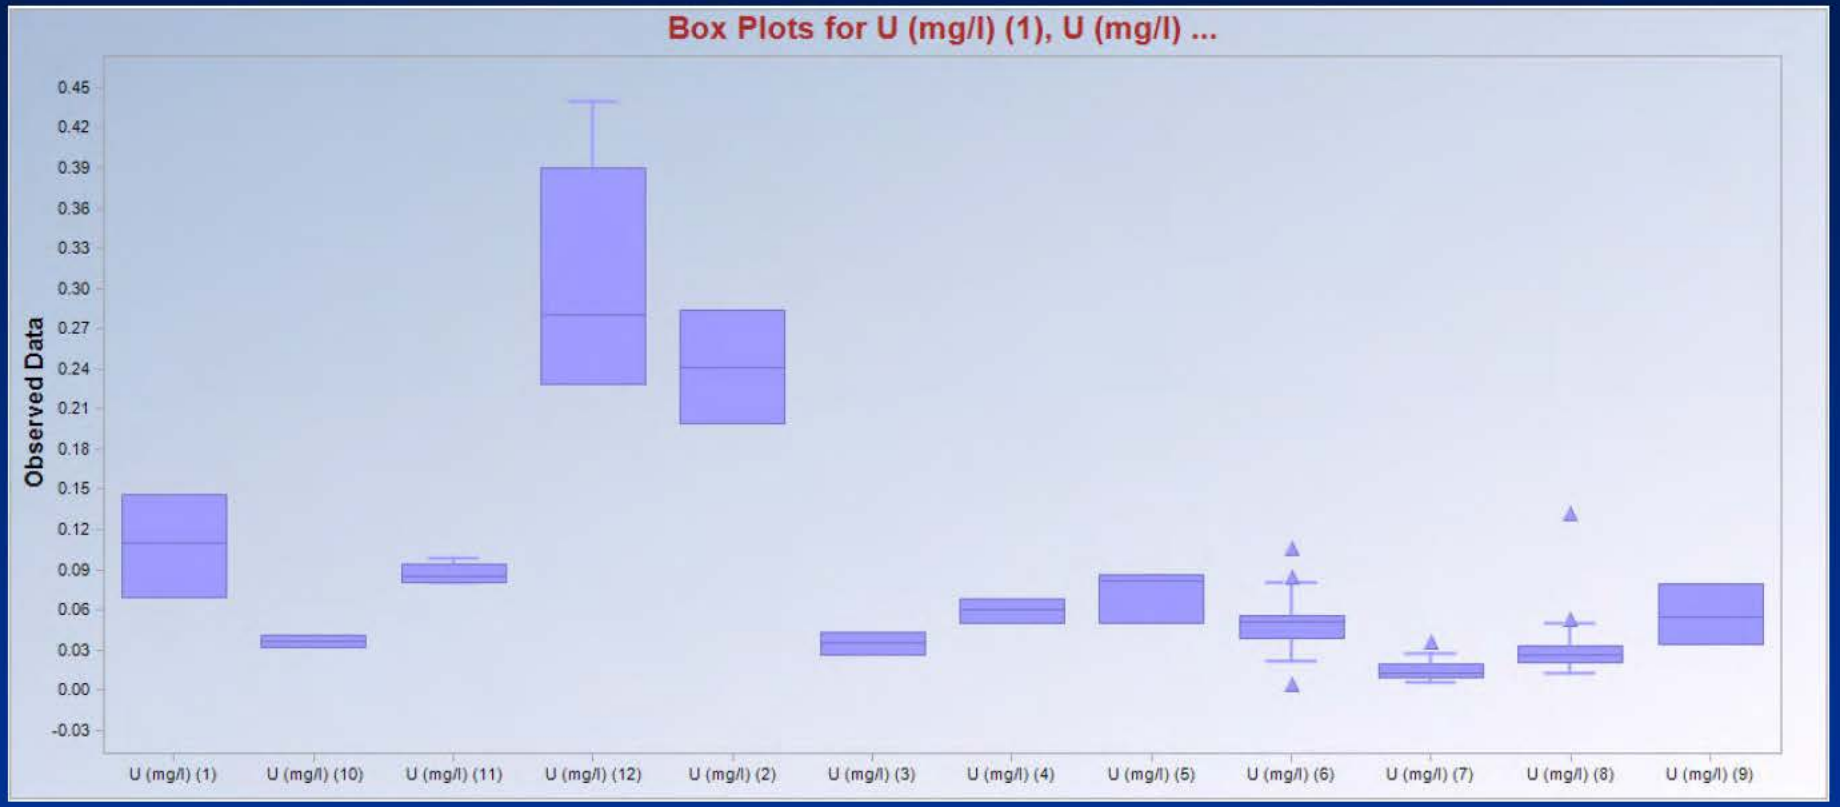
ProUCL 4.1 Example
ISR Wellfield Ore Zone Uranium data set
QQ plot to demonstrate probability distribution and presence of outliers



Question – Does that make sense when compared to same TDS data for same ISR Wellfield?

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

ProUCL 4.1 Example
ISR Wellfield Ore Zone Uranium data set
Box Plot for uranium distribution and outliers for individual wells



Answer: Yes –would expect large heterogeneity in uranium- individual well data show ore zones are naturally heterogeneous in the wellfield

Conclusion- should not use statistics which use normal probability distribution for uranium

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

ProUCL 4.1 Example ISR Wellfield Ore Zone Uranium data set- General background statistics and probability distribution for uranium

Provides min, max, mean, quartiles, median, standard deviation, etc.

Provides normal, lognormal and Gaussian distribution goodness of fit to choose appropriate probability distribution

Provides nonparametric statistics for skewed data and no underlying distribution

ProUCL 4.1 Example
ISR Wellfield Uranium Data Set
Upper Tolerance Limit (UTL)

Upper Tolerance Limit (UTL)- A UTL 95%-90% represents a 95% Upper Confidence Limit (UCL) of the value of the upper 90th percentile.

WHAT DOES IT MEAN?

This is upper limit of the interval which contains the measured value for which 90% of the samples will be less, 95% of the time (WY Guideline 4 outlier "k test" which is based on normal distribution).

Lognormal uranium probability distribution gives UTL95%90% =0.172 mg/l

Non-parametric – no underlying distribution gives UTL95%90% =0.241 mg/l

Choice: You can say with 95% confidence that 90% of the measured values will be less than 0.241 or 0.172 mg/l.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002) and Singh and Singh (2003). For additional insight, the user may want to consult a statistician.

ProUCL 4.1 Example
ISR Wellfield Ore Zone Uranium Data Set
Comparison of Mean, UCL, and UTL

General Rule: Sample Mean < UCL 95% of Mean < UTL 95%-90%

1. **Normal Distribution for Uranium (not indicated by GOF test):**

   0.0645 mg/l < 0.0777 mg/l < 0.198 mg/l

2. **Lognormal Distribution for Uranium (indicated by GOF test) :**

   0.0388 mg/l < 0.0773 mg/l < 0.172 mg/l

3. **Non Parametric – No Distribution for Uranium (recommended for skewed data sets):**

   0.037 (median) mg/l< 0.0993 mg/l < 0.241 mg/l

* Question: Which is acceptable for GWPS?

* Answer: NRC accepts GWPS which can be technically justified

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

How is restoration ground water quality data collected and analyzed?

The licensee collects :

- **Restoration ground water quality of all constituents of concern (COC) at all Point of Compliance Wells (POC) for at least four quarters**

The licensee demonstrates and NRC reviews that:

- **COC meets GWPS – background GWPS previously approved.**
- **No Statistically Significant Increasing (SSI) trend for at least four consecutive quarters to demonstrate each COC GWPS will not be exceeded in POC wells after the restoration is deemed complete**

III. Public Access: Excel Spreadsheets for ISR Wellfield Background and Restoration Ground Water Quality

U.S.NRC
UNITED STATES NUCLEAR REGULATORY COMMISSION
Protecting People and the Environment

Public Access
Excel Spreadsheets for ISR Wellfield Background and Restoration Ground Water Quality

Issue:

Perception by public and others that ISR wellfield ground water quality data has not been measured or is not publicly available.

Facts:

- Large amounts of ISR wellfield ground water quality data has been provided by the licensees to NRC.
- This reported ISR wellfield ground water quality is publicly available in documents in ADAMs.
- Public and others have found access to ISR wellfield ground water quality data difficult as it must be "mined" out of ADAMs documents.

NRC Objective: Improve Public Access

- Develop "user friendly" Excel standard format spreadsheets of publicly available ISR wellfield background and restoration water quality data from NRC licensed sites
- Post Excel spreadsheets to public NRC website to improve PUBLIC ACCESS to already publicly available data

ISR Wellfield Ground Water Quality Status

- 90% of publically available background and restoration ground water quality data for three NRC licensed ISR facilities has been entered into the spreadsheets
- Final data entry ongoing
- All data undergoing extensive quality assurance checks
- Anticipated date for posting of all spreadsheets to NRC public website - September 2013.

Future Actions

Uranium Recovery Briefing to the Commission February 2013
NRC Staff Requirements Memorandum (SRM) (ML13067A365)

> The staff should continue to collect groundwater monitoring well sampling data for in-situ recovery facilities. The staff should make these data publicly available and evaluate these data for insights on performance issues related to groundwater restoration and excursions events.

1. **Background and restoration stability water quality data will continue to be added to Excel spreadsheets for existing and new licensees.**

2. **Excursion water quality data will be added to Excel spreadsheets for all existing and new licensees.**

3. **All ISR water quality in the spreadsheets will be posted on the NRC public web site for improved public access .**

4. **Staff will evaluate the data for insights on performance issues with respect to meeting GWPS and protecting ground water at ISR wellfields**

U.S.NRC

Conclusions
ISR Wellfield Ground Water Quality Data Collection, Statistical Analysis and Public Access

NRC Primary Regulatory Objective: Protect the public health, safety and the environment

- Collect adequate ISR wellfield background water quality data
- Use appropriate statistics (e.g. ProUCL4.1) to establish GWPS
- Collect adequate ISR restoration water quality data
- Use appropriate statistics (e.g. ProUCL4.1) to demonstrate restoration meets GWPS
- Use appropriate statistics (e.g. ProUCL4.1) to demonstrate restoration stability

Public Access- ISR wellfield background, restoration and excursion ground water quality provided to NRC by licensees will be posted to NRC public website in Excel spreadsheets
