Subject: Florida Power and Light Company Nuclear Reactors' Proposal

As a lifelong Dade County resident, I oppose Florida Power & Light Company's attempt to build additional nuclear generators at its Turkey Point facility. This utility is victimizing Miami residents in the following ways:

- charging in advance for nuclear facilities it may never build
- blocking attempts by entrepreneurs to produce cost effective solar power
- starting to draw in 2014 more fresh water from our aquifer supply because its cooling canals are no longer cooling discharged water fast enough. This endangers our drinking water supply by increasing salt water intrusion into the aquifer.

It is ridiculous that one of the sunniest states in the United States is far behind states with less solar availability in the development of renewable solar energy. If Florida Power & Light Company is as technically proficient as it advertises, it should be required to develop more solar energy and not submit its victims to the excessive cost and more inherent safety risks of additional nuclear capacity.
