

June 23, 2015

Thomas K. Spencer
Radiation Safety Officer
3500 Dekalb St
St. Louis, MO 63118

Dear Mr. Spencer,

The U. S. Nuclear Regulatory Commission (NRC) received the Phase 4 – Soil Sampling and Analysis Plan for the Fort Mims Facility (ML15147A565) on May 6, 2015. The Soil Sampling and Analysis Plan appears reasonable towards addressing several NRC concerns, which were discussed in the August 9, 2013 public meeting, including insufficient characterization of the lateral and vertical extent of contamination (ML13280A564). In addition, the Soil Sampling and Analysis Plan is intended to inform groundwater sampling and a site-specific approach to demonstrating compliance with dose criteria, which will be incorporated into a revised decommissioning plan to be submitted to the NRC. NRC staff looks forward to reviewing the results of the Soil Sampling and Analysis Plan results as part of our review of the revised decommissioning plan and the groundwater sampling plan. Together with the revision to the decommissioning plan, the licensee is required to provide a request for an alternate schedule for decommissioning.

In accordance with 10 CFR 2.390 of the NRC's "Agency Rules of Practice and Procedure," a copy of this letter will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records component of NRC's Agencywide Documents Access and Management System (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html>.

If you have any questions concerning the attached information, please contact George Alexander at (814) 297-8385 or at George.Alexander@nrc.gov.

Sincerely,

/RA/

Michael A. Norato Ph.D., Chief
Materials Decommissioning Branch
Division of Decommissioning, Uranium Recovery,
and Waste Programs
Office of Nuclear Material Safety
and Safeguards
