## General Comment

As a person exposed to radiation from TMI in 1979, I had prostate cancer. My father died of cancer, my wife died 3 years ago from cancer - I believe their deaths were linked to TMI releases as we were downwind when TMI took place. We at that time were assured by the nuclear industry, by local government, by state government, and by federal government that there was no harm, no danger. If you go to google and look up lies and nuclear and TMI, you will find that the nuclear industry, the local and state and federal government lied about what happened, how much radiation was released. I don't believe anything from the US government any more.

No radiation is fine by me - any releases are harmful and dangerous and should not be allowed, ever.
