

# PUBLIC SUBMISSION

<b>As of:</b> 6/23/15 2:27 PM
<b>Received:</b> June 17, 2015
<b>Status:</b> Pending_Post
<b>Tracking No.</b> 1jz-8jgt-po66
<b>Comments Due:</b> June 22, 2015
<b>Submission Type:</b> Web

**Docket:** NRC-2009-0279  
Potential Changes to Radiation Protection Regulations

**Comment On:** NRC-2009-0279-0098  
Radiation Protection; Advance Notice of Proposed Rulemaking

**Document:** NRC-2009-0279-DRAFT-0132  
Comment on FR Doc # 2015-06244

---

## Submitter Information

**Name:** Brennan White  
**Address:**  
10828 23rd Ave NE  
Seattle, WA, 98125  
**Email:** Brennw44@yahoo.com

## General Comment

Adding more man made radioactive pollution to our environment is a terrible idea. It is already proving impossible to keep these cancer causing reactor products out of our bodies and the bodies of our children. Despite the claims by pro nuclear cheerleaders and paid off "scientists" there is in fact no such thing as a "safe" amount of radiation. Even tiny increases in radiation lead to correspondingly proportionate increases in cancers and genetic diseases. This is a fact. Many studies done on the populations in Europe following Chernobyl prove this to be true. There is no magic threshold where radiation will never negatively impact our health. Radiation, especially man made radiation from nuclear power reactors, is a highly mutagenic poison to all life on Earth. Instead of proposing deceptive changes to regulations which would allow even greater QUANTITIES of radioactive materials to be released into our environment we should instead be doing the exact opposite course of action and drastically cutting back on releases of man made radioactive cancer death materials. Diluting radioactive pollution is not a solution; ever. This is mass murder. Many rad isotopes will naturally bioaccumulate in the natural food chain. This reconcentrates the "diluted" pollution, as proven by very recent data from Fukushima radioactive isotopes being found in very high levels in Pacific Ocean organisms. Humans are the top of the food chain and we will most certainly reap what we sow. If we allow nuclear reactors to add ever more radioactive pollution to the environment and food chain then we are selling our children's future health to make profits today. That is criminal and must not be allowed. Cancer before nuclear was 7% of the population. Now it is 56%+ of the population which will be cursed with cancer. Before nuclear background radiation was 1 milliseivert per hour. Now after Fukushima, Chernobyl, Three Mile Island, bomb tests and countless other nuclear accidents we are exposed to

over 6.2 milliseiverts per hour. Look into Dr. Helen Caldicott, Dr. Michio Kaku, Dr. Busby, Jeff Rense, Nuclear Hotseat, Enenews.com, nukerprofessional.blogspot.com, fukushima-diary.com, Kevin Blanch.
