Subject: [External_Sender] Comment Docket No s . PRM - 20 - 28, PRM - 20 - 29, and PRM - 20 - 30 ; NRC - 20 15 - 0057

Dear Nuclear Regulatory Commission,

Comment:

I support the petition.

Standards should be based on science and models should easily predict reality. It is clear that the current linear no threshold model, while easy to apply, grossly overestimates risk and does not predict or reflect science or reality.

If the NRC elects not to adopt the petitioner's hormesis model, it should adopt a model more closely modeling what is observed.

Thank you for your consideration.

William Klenke
