---

The proprietary version of this document contains the D5 correlation data requested by the NRC to support the review of the D5 dryout correlation topical report, WCAP-17794-P (Reference 1). The data consists of the predicted Critical Power Ratio (CPR) corresponding to each data point of the experimental data from the FRIGG SVEA-96 Optima3 steady-state dryout database. Since the transmittal is proprietary in its entirety, this summary serves as the non-proprietary version of the transmittal.
