## General Comment

We live in a universe comprised of matter and radiation. Too much of either is as deadly as too little...

The LNT Model needs to be removed from the NRC standards for determining health impacts of radiation and replaced by standards based on current science, a more comprehensive view of health needs and standard risk assessment practice:

<http://www.epa.gov/radiation/understand/perspective.html>.

For the first time in history, modern energy generating technologies can be used to deliver clean air and water, sustainable communities and global prosperity for billions, forever:

<https://www.youtube.com/watch?v=uK367T7h6ZY> <http://www.ecomodernism.org/manifesto/>.

The NRC can literally make history by updating all regulatory requirements to reflect current science, and streamline the production of modular molten salt reactors. To secure essential public support, please consider funding this update and construction of prototypes to demonstrate efficacy, in a national project which would make JFK's Moonwalk look like child's play!
