General Comment

The two new proposed nuclear reactors at Turkey Point are not only dangerous for the environment, but dangerous for the community in a fragile location. With the two new reactors having a much larger power capacity than the existing ones, increasing amounts of spent nuclear fuel containing uranium-235, plutonium, and other dangerous radioactive materials will be accumulating in a flood and hurricane prone location for many years to come. The tragedy of Fukushima should have been the last word on building nuclear plants in vulnerable coastal locations like this one.

FPL should be investing in solar power, rather than nuclear power, where the risk and payoff make far more sense. Stop this development at Turkey Point, before it's too late!
