General Comment

I will sum it up with one word Fukushima! Let us learn from the mistakes we as a human race have made. This fragile one of a kind Eco system is irreplaceable. It is time to transform to ways that are in harmony with earth. Why can we not choose to build a solar plant or a solution in alignment that would be much less harmful when a disaster occurs.

It appears that a few will be able to profit off this project at the demise of far more people, animals and plant life. Now does that seem like a logical balanced decision. The way it appears it does not really seem to matter what the majority of people or animals that call this amazing place home seem to think, feel or want in this matter.

The truth is we do not want this close to our homes or in our environment period! It's toxic and deadly to life! We want to live healthy while we are here on this beautiful planet. Please honor life and the planet give back with sustainable non toxic solutions to the environment and all living beings.
