## General Comment

Even if this new plant were to operate for its entire lifetime with a 100% safety record, the impact of building and operating such a plant and transmission lines will be catastrophic.

However, due to rising sea-levels and hurricanes the potential for this plant to become another Fukushima in its lifetime is very real.

It seems that the ingredients for a 'Perfect Storm' are being assembled as I read that you will also be adding 'wastewater' to the mix with its intendant biohazards.

After the storm, survivors might ask "What WERE they thinking??"

Now is the time to turn this turkey around and plant solar panels instead of nuclear plants.  
Thankyou.
