

July 23, 2015

On October 30, 2014, the U.S. Nuclear Regulatory Commission (NRC) published, in the *Federal Register* (79 FR 64629), the notice of availability of the environmental assessment (EA) and finding of no significant impact (FONSI) for renewal of Crow Butte Resources, Inc. (CBR) Source Material License SUA-1534 for continued uranium production operations and in situ recovery (ISR) of uranium at the Crow Butte Project in Crawford, Nebraska. Following publication of the EA, the NRC staff identified an error in the EA regarding the characterization of the terms of CBR's National Pollution Discharge Elimination System (NPDES) permit for land application of treated process wastewater.

In the EA's description of CBR's NPDES permit No. NE0130613, issued by the State of Nebraska Department of Environmental Quality (NEDEQ), the NRC states that "Land application after wet weather events will not be utilized by CBR since it is not included in the current NPDES permit No. NE0130613 from the State of Nebraska." Based upon the information in the NPDES permit, the relevant portion of that statement should instead state that "Land application except during and immediately after wet weather events will not be utilized by CBR..."

The characterization of the NPDES permit's terms regarding the permitted timeframe for the use of land application during and immediately after wet weather events was a drafting error that does not affect the NRC staff's analyses or conclusions in the EA, nor the issuance of the FONSI.

To address this matter, the NRC staff has prepared this errata to the EA.

ERRATA

EA Section	Page	Correction
2.4.1 Disposal of Pond Water	12	First full paragraph of Section 2.4.1: <ul style="list-style-type: none">• Insert "except during and immediately" after "Land application"

Enclosure
