Holtec Casks have NOT been tested for the newly discovered Supersonic Shear Earthquake Motion. Therefore they should NOT be used in California or any other earthquake area.

California agriculture and population centers potentially can be effected after worst case Diablo Canyon meltdown and fuel pool fires. Holtec casks at San Onofre would rupture after Supersonic Shear Earthquake. Ten Million people live in that area.

"We regard as the best wine any kind which can keep without preservatives."

"Nor should anything at all be mixed with it by which its natural flavor would be obscured."

"For that wine which is most excellent which has given pleasure by its own natural quality."

Columella AD 65 - Famed Roman Agricultural Writer
