General Comment

I am writing to say that I am against placing additional nuclear reactors at Biscayne Bay. Two of South Florida's most important public lands and wildlife habitats - Biscayne and Everglades National Parks - will be put at risk and be forever changed by a project of this scale. Some of the water that cools the reactors could be released over Biscayne Bay and surrounding wetlands along with steam in the planned cooling towers. We are in a hurricane prone location which can easily damage a nuclear reactor and in an area which will most likely see rising sea levels in the not too distant future. After what happened at Fukushima, I can't believe that we are considering adding nuclear power plants at this location. Please consider the impacts of dumping additional hot water directly into Biscayne Bay. I'd like to know why solar power, in the sunshine state, is not being considered as an alternative. We need to stop and think about the consequences of our actions on our delicate environment here in South Florida.
