General Comment

NUCLEAR POWER IS POISON and cannot co-exist in the same space with life on earth. Uranium 238 is permanent since and has a half-life of 4.5 billion years, making contaminated areas uninhabitable for eternity. And where are you guys going to bury the nuclear waste? You have already run out of places to bury it.

Further, your Thorium-based nuclear systems are still too dangerous and will last a few hundred years instead of 10,000 or more years from uranium waste. I believe it was Dana Durnford, the Nuclear Proctologist who said "Thorium is more expensive than uranium because it can't sustain a reaction by itself and must be bombarded with neutrons."

A total of 17,155,535 people live within 19 miles of a nuclear plant. I guess that's still not enough for you nuclear madmen to reduce earth's population.

Documentaries:

Into Eternity (A Nuclear Waste World)" Documentary on the idiocy of the Atomic Age and the long term ramifications of storing nuclear waste. https://www.youtube.com/watch?v=SBrM_zwSdSI
