**Subject:** [External\_Sender] Docket ID NRC-2015-0057. KEEP the Linear No-Threshold (LNT) model for radiation exposure!!!!!!

Many, many doctors, researchers, scientists, even nuclear industry experts all agree, there is NO safe dose of radiation. There is NO threshold below which damage does not occur.

Here's what [Dr. John W. Goffman, MD, PhD](#), a researcher in connection with the Manhattan Project, had to say:

"It is factually wrong to believe or to claim that no harm has ever been proven from very low-dose radiation. On the contrary. Existing human evidence shows cancer-induction by radiation at and near the lowest possible dose and dose-rate with respect to cell-nuclei. By any reasonable standard of scientific proof, such evidence demonstrates that there is no safe dose or dose-rate below which dangers disappear. No threshold-dose. Serious, lethal effects from minimal radiation doses are not "hypothetical," "just theoretical," or "imaginary." They are real."

Hormesis is just an excuse to keep people in radiologically contaminated areas.

Shame on you NRC!

Keep the LNT!!
