## General Comment

This sounds like the mouth pieces of corporate nuclear are strategizing once again. I think you should consult all of those that have seen or felt radioactive illness or injury to get their opinions about this change, like the sailors on the USS Ronald Reagan. It's a lot more than just cancer. Money needs to be removed from the equation when public health is at stake. Pandora's box is already open. We can only mitigate future damage. I see no reason to change current limits.
