General Comment

The only reason to accept this proposal to change from a LNT standard of radiation exposure safety to a hormesis theory standard is to save the nuclear industry money in both remediation of over exposure to irradiated material and increased hazardous human health standards.

And this still does not address the fact that there is no long term storage of nuclear waste.

I do not favor this proposal. Nuclear industry must be held accountable for the risks of accidents, contamination and dangers. They do not deserve any further taxpayer or ratepayer bailouts until they can prove the industry can actually operate environmentally safely and cleanly and without increasing the dangers to people.

Please do not accept this proposal.
