## General Comment

Ongoing TRIPLE MELTDOWNS and the continuous FALLOUT from Fukushima, (4 plus years), should be reason enough to STOP this technology dead in it's tracks before it damages any more of our planet. Building more Nuclear Plants is a BAD idea. The overall RISK to all living things is just too great. It's proven, containment is a fallacy.

"No degree of prosperity could justify the accumulation of large amounts of highly toxic substances which nobody knows how to make 'safe' and which remain an INCALCULABLE danger to the whole of creation for historical or even GEOLOGICAL AGES. To do such a thing is a transgression against life itself, a transgression infinitely more serious than any crime ever perpetrated by man. The idea that a civilization could sustain itself on the basis of such a transgression is an ethical, spiritual, and metaphysical monstrosity. It means conducting the economic affairs of man as if people (or all life forms) really did not matter at all."

E.F. Schumacher

1973 Small Is Beautiful: Economics As If People Mattered,  
 (Chp. 4, Nuclear Energy--Salvation or Damnation? )
