General Comment

I am opposed to building a new reactor at Turkey Point since it will require a vast amount of water which is a very valuable resources. It will also be very expensive to construct and could be dangerous in the case of a hurricane.

This is not a worthwhile investment for the people of Florida. If the public was properly informed about the construction they would be against it.

Instead of building large power plants, the Florida government should focus on harnessing solar energy. Unlike this nuclear power plant, solar panels do not require any valuable water or expensive infrastructure. They also do not create waste product and do not require the electricity to be transported.

The construction of a new power plant is a very bad investment for the people of Florida and should not be carried out.
