NRC Approves Changes to Petition-for-Rulemaking Process

The Nuclear Regulatory Commission today approved a final rule that will streamline and clarify its process for addressing petitions for rulemaking. The new rule will be published shortly in the *Federal Register*.

Any member of the public can petition the NRC to issue a new regulation or amend an existing one. The final rule marks the first comprehensive update to the NRC's process for considering rulemaking petitions since the process was established in 1979. The NRC published proposed changes for comment in May 2013, and considered the comments received in finalizing the rule.

The revisions will clarify the NRC's policies and practices at each stage of the petition-for-rulemaking process, including how the staff evaluates petitions and how it communicates information about both the status of petitions and rulemaking activities that address them. It also improves the process for resolving a rulemaking petition and for closing the petition docket, which would occur after the NRC denies a petition or initiates a rulemaking to address a petitioner's concerns. The changes are intended to enhance the consistency, timeliness and transparency of the process and improve its efficiency.

More information about the petition-for-rulemaking process can be found on the NRC's [website](#).
