C. BAILEY DIXON  
VICE PRESIDENT  
ENGINEERING

May 30, 1979

Mr. Joseph M. Hendrie, Chairman  
Nuclear Regulatory Commission  
1717 H Street  
Washington, D. C. 20555

Dear Mr. Hendrie:

It has recently come to my realization that your Commission has the power to shut down my company's power supply. This, of course, resulting in higher utility costs, unreliable power, and inadequate energy to run our plants. Evidently, this power was given to you by the legislative branch of our government.

Therefore, I wish to thank you for the net result of not completely crippling our power source, Duke Power Co. I would plead with you to use good judgment in your decision, based on intelligent facts.

The engineers served by Duke Power Co. find their organization from bottom to top most confident and reliable. Under these conditions, I would urge most enthusiastically for the continuing generation of nuclear electricity.

Since you do have the awesome power of killing an economy, I pray that you and your Commission are competent and wise.

Thank you for giving me this attention.

Yours truly,

  
C. Bailey Dixon
