General Comment

I oppose this new proposed rule. The Linear No-Threshold Model has not been "debunked". This is a ploy by industry supported science to prop up a dying industry which will try any trick, however harmful to public health, in order to survive and continue propping up corporate profits.

This is yet another version of the product defense strategy first pioneered by the tobacco industry whose sole aim is to inject doubt regarding the widespread (and valid) fears which exist in relation to this deadly industry.

Please heed the voices of scientists like Chris Busby, nuclear engineers like Arnie Gunderson and others.
