## General Comment

Please do not increase the standards for radiation exposure. The risks are too serious. Stay with the Linear No Treshold Standards for Radiation, which is upheld by the latest National Academy of Sciences report on low level radiation, a report sponsored by the NRC itself- and the Departments of Defense, Energy, and Homeland Security and the EPA. The chair of the reporting committee, Dr. Richard Monson from the Harvard School of Public Health states:

"The scientific research base shows that there is no threshold of exposure below which low levels of ionizing radiation can be demonstrated to be harmless or beneficial."
