General Comment

It has been proven through science that even low external doses from ionizing radiation is harmful to DNA strands,

sometimes these will be repaired by the body if the body is healthy and of a more mature stage in life.

When a double strand is broken via ionizing radiation then a mutation of the cell can form, and we have absolute proof yet again

that even very small external doses can break down the DNA molecules. In young bodies and women, the amount of cell division

is much greater than in adult male bodies, so I have to ask this question. Do YOU want your children, wives, sisters, mothers to be

ensured of particular cancers, i.e. (Thyroid, leukemia and heart tissue breakdown) as the risk of these diseases are compounded

by more and more exposure to radiation not less. I implore you to end this folly that radiation can be good for you.

Thank you for providing a method to say my piece.
