

PUBLIC SUBMISSION

As of: 8/25/15 3:02 PM Received: August 20, 2015 Status: Pending_Post Tracking No. 1jz-8knu-uruc Comments Due: September 08, 2015 Submission Type: Web

Docket: NRC-2015-0057

Linear No-Threshold Model and Standards for Protection Against Radiation

Comment On: NRC-2015-0057-0010

Linear No-Threshold Model and Standards for Protection Against Radiation; Notice of Docketing and Request for Comment

Document: NRC-2015-0057-DRAFT-0150

Comment on FR Doc # 2015-15441

Submitter Information

Name: Fran Teresi

General Comment

Putting the health of the public at risk for the sake of industry is unscientific and immoral, especially in the cases of pregnant women, young children and the elderly.

Raising the level of permitted radiation allowed for the public is akin to a national science experiment. Where is your conscience?

Much of the radioactive material from the oil/gas industry is ending up in landfills that may leach into drinking water sources. Has any research been done concerning the ingestion of radioactive water? Some brine is being used in the winter on roads. Again, is there any research on the results of radioactive run-off from roads?

You are reaching conclusions gleaned from nuclear power plant workers. Men. I doubt there are any pregnant women, young children or elderly working at nuclear power plants. The information you are using cannot be applied to the population in general.

Please think again. America's health care costs are already spirally out of control. The country cannot afford to have the permitted radioactive levels raised for the public in general.
