

SAFETY INSPECTION REPORT AND COMPLIANCE INSPECTION

1. LICENSEE/LOCATION INSPECTED:

Resource International, Inc.
6350 Presidential Gateway
Columbus, OH 43231
Location Inspected: Jeffersonville, Indiana

REPORT NUMBER(S) 2015-001

2. NRC/REGIONAL OFFICE

Region III
U. S. Nuclear Regulatory Commission
2443 Warrenville Road, Suite 210
Lisle, IL 60532-4352

3. DOCKET NUMBER(S)

150-00034

4. LICENSE NUMBER(S)

OH-31210250047

5. DATE(S) OF INSPECTION

September 1, 2015

LICENSEE:

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

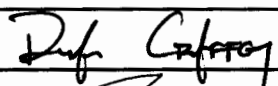

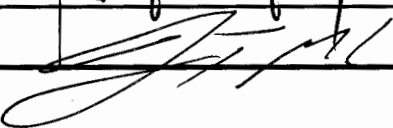

- ☒ 1. Based on the inspection findings, no violations were identified.
- ☐ 2. Previous violation(s) closed.
- ☐ 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, to exercise discretion, were satisfied.

Non-cited violation(s) were discussed involving the following requirement(s):

- ☐ 4. During this inspection, certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited in accordance with NRC Enforcement Policy. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.
(Violations and Corrective Actions)

Statement of Corrective Actions

I hereby state that, within 30 days, the actions described by me to the Inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

Field Office Inspection

Temporary Job Site Inspection 1302 Port Road, Jeffersonville, Indiana

PROGRAM SCOPE

This was an unannounced field inspection of a consulting, engineering and construction services firm authorized by its State of Ohio license to store portable moisture-density gauges at its various field offices in Ohio and to use them at temporary job sites in Ohio jurisdiction. At the time of this inspection, the licensee conducted these activities at temporary job sites in NRC jurisdiction under a reciprocity request filed in April 2015 for the remainder of the calendar year. The licensee routinely used one Troxler gauge at the IN-265 East End Crossing construction project in Jeffersonville, Indiana, and stored it nightly across the river in Kentucky under a similar reciprocity agreement filed with the Commonwealth. However, the licensee was considering storing the gauge at the Port Road facility in a trailer which it had recently relocated there.

PERFORMANCE OBSERVATIONS

The inspector found that the gauge user (the Site RSO) maintained control and constant surveillance of the licensee's gauge at all times during the inspection. The gauge user also maintained two independent physical controls that formed tangible barriers against unauthorized removal of the gauge whenever it was not in use, using a series of locks and chains to secure the gauge in its transport case in the bed of his truck. The inspector discussed with the user the safe use and transportation of the gauge, as well as emergency response procedures, and found him to be knowledgeable of radiation protection principles and licensee procedures. The inspector reviewed and discussed with the user the licensee's conduct of activities under reciprocity and the future storage of gauges on-site at the Port Road facility. The inspector found that the available security measures there appeared to be adequate should the licensee choose to utilize them as described. The inspector also reviewed the shipping papers and leak tests for the gauge, as well as the user's radiation safety officer, gauge safety and hazmat training certificates.

No violations of NRC requirements were identified as a result of this inspection.
