General Comment

Bergan's the quack. According to the UK government health services he is WRONG:

"Chronic fatigue syndrome (CFS) causes persistent fatigue (exhaustion) that affects everyday life and doesn't go away with sleep or rest. / CFS is also known as ME, which stands for myalgic encephalomyelitis. There's some debate over the correct term to use for the condition, but these pages will refer to the condition as CFS." <http://www.nhs.uk/conditions/Chronic-fatigue-syndrome/Pages/Introduction.aspx> There is little known about autoimmune disorders, in reality. Causes are recognized as diverse. Why would the body attack itself? It makes a lot of sense that these are due to inflammation caused by radiation in some instances; gene damage from radiation in others. While some rheumatoid predates the nuclear age, it may be genetic damage from early mining and radiation exposure. Bergan bases his homicidal support of 100 mSv - homicidal for it will lead to over 100 cancers per 100 people - opinions on Ed Calabrese who has been funded by the US military, US DOE and various corporations to prove that radiation and toxic chemicals are good for you. If you are trying to PROVE something, as Calabrese is, that is already bad science. The nature of his funded says it all. If you allow pro-nuclear lackey like Bergan to comment on comments you will stay busy. By the way, I'm not the original poster and don't know what they said. But, I read Bergan's comments.
