General Comment

Regarding Docket ID NRC-2015-0057, I emphatically disagree with any changes to the Linear No-Threshold Model(LNT) which would increase the current level of radiation exposure. To institute such changes would not be protective of those who would be the most adversely affected by the increase, the people. Any increase in rad exposure levels would only serve to protect Corporations. The citizens of the United States do not deserve to be treated as though their lives are expendable. I live in a community that has suffered for decades from the mishandling of Manhattan Project radioactive waste in the North County area of St. Louis MO. Thousands of people, young and old, are sick and dying from Chronic Low Level Ionizing Radiation Exposure from Manhattan Project waste. No one understands more about the terrible consequences of what will result from raising the LNT then those families who are caring for and watching their loved ones die from chronic low level ionizing radiation exposure. We have a Cancer Cluster in North St Louis County via the current LNT. Rare cancers have been confirmed in several North St Louis County zip codes. I implore you to Do The Right Thing For The Children, The People, The Future of our great country.
