Subject: **Oconee Nuclear Station**
Docket Nos. 50-269, -270, -287
Auxiliary Electrical Systems
Proposed Technical Specifications

Gentlemen:

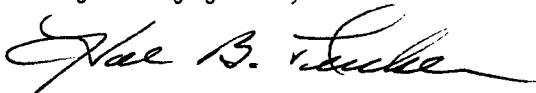

Pursuant to 10CFR50, Part 50.90, please find attached (Attachment 1) a proposed amendment to the Oconee Nuclear Station (ONS) facility operating licenses and revisions to the ONS Technical Specifications. Changes included within this request supercede my May 12, 1989 request in its entirety. As detailed in Licensee Event Reports (LER) 269/87-09 and 269/89-09 changes to Specification 3.7 are necessary in order to resolve apparent conflicts regarding operability of Emergency Power Switching Logic (EPSL) functional units and to require operability of both standby buses. In addition, the following changes have been included within this amendment request:

- o Operability requirements for 125VDC instrumentation and control batteries have been updated;
- o Operability requirements for Keowee auxiliary transformers are included;
- o The Bases have been revised to reflect changes to Specification 3.7.

I have determined the attached proposed amendment as having no significant hazards considerations. Attachment 3 provides the No Significant Hazards Consideration Evaluation. Attachment 2 provides the supporting Technical Justification.

I am forwarding a copy of this application to the South Carolina Department of Health and Environmental Control for review and, as appropriate, subsequent consultation with the staff.

Very truly yours,

Hal B. Tucker
