

Summary of NRC comments on Op Test can be found on the summary of changes page of each of the final operating test item.

Admin Topics Outline Changes:

Three changes were made to the Administrative Topics Outline based on feedback from the NRC Chief Examiner after reviewing the outline submittal:

Comment #1: RO A.1.1 (Conduct of Operations) "Administrative requirements for shift manning activities & work hour limitations" topic is similar to the topic used on the 2011 NRC Exam.

Resolution: Changed topic to "Perform AC electrical source inoperability surveillance requirements" (KA: GEN.2.1.31).

Comment #2: RO A.3 (Radiation Control) "Review a radiological work procedure and survey map" topic is similar to the topic used on the 2013 NRC Exam.

Resolution: Changed topic to "Make preparations required to remove a radiation monitor from service" (KA: GEN.2.3.5). Verified JPM content is significantly different from 2013 JPM "Actions and Expected Response for RMS Equipment Failure Alarms."

Comment #3: SRO A.3 (Radiation Control) "Determine and perform actions required to remove a radiation monitor from service " topic is similar to a topic used on the 2013 NRC Exam.

Resolution: Changed topic to "Review and approve a radioactive liquid waste discharge permit" (KA: GEN.2.3.6).
