Mr. Benard C. Rusche, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attention: Mr. A. Schwencer, Chief
Operating Reactors Branch #1

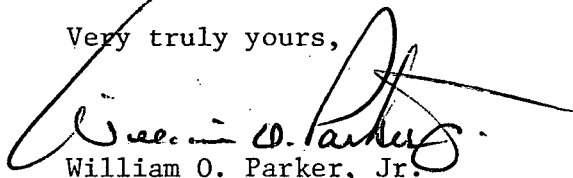

Re: Oconee Nuclear Station
Docket Nos. 50-269, 50-270, 50-287

Dear Mr. Rusche:

Your letter dated August 18, 1976 stated the staff's position that secondary water chemistry monitoring requirements should be made a part of the Technical Specifications for each pressurized water reactor. A model specification was included in your letter as a guide for use in preparation of a specification for Oconee Nuclear Station. The Oconee Nuclear Station utilizes steam generators of the "once-through" design and secondary water chemistry controlled through a full flow condensate polishing system with volatile chemical additives. Therefore, the pH, total solids, and condensate cation requirements of the model specification are not directly applicable to the Oconee design.

It is requested, pursuant to 10CFR50, §50.90 that the Oconee Nuclear Station Technical Specifications be revised to incorporate the attached secondary water chemistry specifications. These specifications place appropriate limitations on the cation conductivity of final feedwater.

Very truly yours,

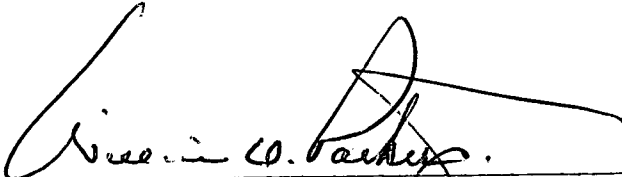

William O. Parker, Jr.

WILLIAM O. PARKER, JR., being duly sworn, states that he is Vice President of Duke Power Company; that he is authorized on the part of said Company to sign and file with the Nuclear Regulatory Commission this request for amendment of the Oconee Nuclear Station Technical Specifications, Appendix A to Facility Operating Licenses DPR-38, -47 and DPR-55; and that all statements and matters set forth therein are true and correct to the best of his knowledge.

William O. Parker, Jr., Vice President
