I'm dismayed by the prospect of renewed uranium ISL mining in Crook County, WY. I live in the Black Hills of SD, where we have had similar experience with the devastating effects of past mining exploitation, including uranium production. In this quite arid part of the world, the idea of changing the chemical composition of aquifers, with the possibility of cross-contamination of underground water bodies, seems quite foolhardy, particularly in light of questionable social benefit from the uranium which might be harvested. Authoritative sources now make it clear that nuclear power will remain the most expensive and rapidly outmoded means of electricity generation, and that solar+wind+storage has been shown to provide ample peak- and base-load energy for the electrical grid. Thus, to be using precious water resources prospecting for uranium in areas of great natural beauty seems ironic, as well as extremely unwise.

I urge you to oppose this project.

Thank you for your consideration.

Sincerely,

Don Kelley, M.D.
