Dear Cindy,

I urge your agency to be diligent concerning the plugging of not only existing drill holes but of all drill holes to prevent the risk of water contamination, Wyoming relies heavily on our subsurface water for not only our lively hood but for life itself, pollution of our water sources or waste of our water resources imperils the habitability of our region.

To date no previous uranium project has fully restored an aquifer to pre mining water quality-- why has this not been a requirement?

Wyoming has been host to many energy projects, and while there is great effort with little expense spared at the start of these projects, the developers all seem to be out of money for reclamation when they leave, sticking the citizens with the cost of cleanup and an environmental hazard. Please insure that this does not happen again this time.

Thank You, Val Snyder
