The process of establishing exam dates for licensed operator examinations requires a significant degree of flexibility. In response to the annual submissions of NRC Form 536 to project exam dates, the NRC regional office sometimes responds with alternative dates that differ significantly from the dates requested. Because utilities have to schedule class and exam dates around outages and must account for overlap between classes, reducing the GFE offerings to two significantly hampers the ability of the utility to sequence and schedule instruction properly. Recommend retaining the four annual GFE offerings that are currently provided.
