Subject: Re: TS change for 6% fuel to omit section reference
Date: Thursday, May 12, 2016 10:43:01 AM

The current SAR is not in NUREG 1537 format and currently that information is in Section 1 and 3. We are transitioning to NUREG 1537 format so the information will be relocated to Sections 1 and 4.

By removing the specificity of the location in the SAR it allows the ability to move the information without requesting a license amendment. TS 5.1 continues to require it to be in the SAR.

Thanks, Andrew

In the new TS for 5.1, you state:

- a. The reactor fuel shall be UO_2 with a nominal enrichment of 4% or 6% in U-235, zircaloy clad, with fabrication details as described in the Safety Analysis Report.

Why did you take out specific reference to Section 3 of SAR?
