AVAILABILITY OF REFERENCE MATERIALS IN NRC PUBLICATIONS

NRC Reference Material

As of November 1999, you may electronically access NUREG-series publications and other NRC records at NRC's Library at www.nrc.gov/reading-rm.html. Publicly released records include, to name a few, NUREG-series publications; *Federal Register* notices; applicant, licensee, and vendor documents and correspondence; NRC correspondence and internal memoranda; bulletins and information notices; inspection and investigative reports; licensee event reports; and Commission papers and their attachments.

NRC publications in the NUREG series, NRC regulations, and Title 10, "Energy," in the *Code of Federal Regulations* may also be purchased from one of these two sources.

A single copy of each NRC draft report for comment is available free, to the extent of supply, upon written request as follows:

Address: U.S. Nuclear Regulatory Commission

Office of Administration
Publications Branch
Washington, DC 20555-0001
E-mail: distribution.resource@nrc.gov
Facsimile: (301) 415-2289

Some publications in the NUREG series that are posted at NRC's Web site address www.nrc.gov/reading-rm/doc-collections/nuregs are updated periodically and may differ from the last printed version. Although references to material found on a Web site bear the date the material was accessed, the material available on the date cited may subsequently be removed from the site.

Non-NRC Reference Material

Documents available from public and special technical libraries include all open literature items, such as books, journal articles, transactions, *Federal Register* notices, Federal and State legislation, and congressional reports. Such documents as theses, dissertations, foreign reports and translations, and non-NRC conference proceedings may be purchased from their sponsoring organization.

Copies of industry codes and standards used in a substantive manner in the NRC regulatory process are maintained at—

The NRC Technical Library

Two White Flint North
11545 Rockville Pike
Rockville, MD 20852-2738

These standards are available in the library for reference use by the public. Codes and standards are usually copyrighted and may be purchased from the originating organization or, if they are American National Standards, from—

American National Standards Institute

Legally binding regulatory requirements are stated only in laws; NRC regulations; licenses, including technical specifications; or orders, not in NUREG-series publications. The views expressed in contractor-prepared publications in this series are not necessarily those of the NRC.

The NUREG series comprises (1) technical and administrative reports and books prepared by the staff (NUREG-XXXX) or agency contractors (NUREG/CR-XXXX), (2) proceedings of conferences (NUREG/CP-XXXX), (3) reports resulting from international agreements (NUREG/IA-XXXX), (4) brochures (NUREG/BR-XXXX), and (5) compilations of legal decisions and orders of the Commission and Atomic and Safety Licensing Boards and of Directors' decisions under Section 2.206 of NRC's regulations (NUREG-0750).

DISCLAIMER: This report was prepared as an account of work sponsored by an agency of the U.S. Government. Neither the U.S. Government nor any agency thereof, nor any employee, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for any third party's use, or the results of such use, of any information, apparatus, product, or process disclosed in this publication, or represents that its use by such third party would not infringe privately owned rights.

Final Safety Evaluation Report for the Combined License for Enrico Fermi 3

Docket Number 52-033

DTE Electric Company

Appendices B to F

Manuscript Completed: November 2015
Date Published: May 2016

ABSTRACT

This final safety evaluation report¹ (FSER) documents the U.S. Nuclear Regulatory Commission (NRC) staff's technical review of the combined license (COL) application for the Enrico Fermi Unit 3.

In a letter dated September 18, 2008, DTE Electric Company (DTE, formerly Detroit Edison Company²) submitted an application to the U.S. Nuclear Regulatory Commission (NRC or the Commission) for a COL to construct and operate an Economic Simplified Boiling-Water Reactor (ESBWR) pursuant to the requirements of Section 103 and 185(b) of the *Atomic Energy Act of 1954 as Amended (AEA)*, Title 10 of the *Code of Federal Regulations* (10 CFR) Part 52, "Licenses, Certifications and Approval for Nuclear Power Plants," and the associated material licenses under 10 CFR Part 30, "Rules of General Applicability to Domestic Licensing of Byproduct Material"; 10 CFR Part 40, "Domestic Licensing of Source Material"; and 10 CFR Part 70, "Domestic Licensing of Special Nuclear Material." This reactor will be identified as Fermi 3 and will be located on the existing Fermi site in Monroe County, Michigan. The initial application incorporated by reference the General Electric-Hitachi's (GEH's) application for the ESBWR design certification, as described in Revision 4 of the design control document (DCD) (submitted September 8, 2007). In a letter dated October 31, 2014, (COL application submittal Revision 8), the applicant incorporated by reference ESBWR DCD, Revision 10. The results of the NRC staff's evaluation of the ESBWR DCD are in NUREG-1966, "Final Safety Evaluation Report Related to the Certification of the Economic Simplified Boiling-Water Reactor Standard Design," and its supplement.

¹ This FSER documents the NRC staff's position on all safety issues associated with the combined license application. The Advisory Committee on Reactor Safeguards (ACRS) independently reviewed those aspects of the application that concern safety, as well as the advanced safety evaluation report without open items (an earlier version of this document), and provided the results of its review to the Commission in a report dated September 22, 2014. This report is included as Appendix F to this SER.

² By letter dated December 21, 2012, the Detroit Edison Company informed the NRC that effective January 1, 2013, the name of the company would be changed to "DTE Electric Company." The legal entity remains the same.

This FSER presents the results of the staff's review of information submitted in conjunction with the COL application, except those matters resolved as part of the referenced design certification rule. In Appendix A to this FSER, the staff has identified certain license conditions and inspections, tests, analyses and acceptance criteria (ITAAC) that the staff recommends the Commission impose, should the COL be issued to the applicant. In addition to the ITAAC in Appendix A, the ITAAC found in the ESBWR DCD Revision 10, Tier 1 material will also be incorporated into the COL should the COL be issued to the applicant.

On the basis of the staff's review ³ of the application, as documented in this FSER, the staff recommends that the Commission find the following with respect to the safety aspects of the COL application: 1) the applicable standards and requirements of the Atomic Energy Act and Commission regulations have been met, 2) required notifications to other agencies or bodies have been duly made, 3) there is reasonable assurance that the facility will be constructed and will operate in conformity with the license, the provisions of the Atomic Energy Act, and the Commission's regulations, 4) the applicant is technically and financially qualified to engage in the activities authorized, and 5) issuance of the license will not be inimical to the common defense and security or to the health and safety of the public.

PAPERWORK REDUCTION ACT STATEMENT

This NUREG contains and references information collection requirements that are subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.). Existing requirements were approved by the Office of Management and Budget (OMB), approval numbers 3150-0014, 3150-0017, 3150-0214, 3150-0020, 3150-0011, 3150-0151, 3150-0009, and 3150-0002.

PUBLIC PROTECTION NOTIFICATION

The NRC may not conduct or sponsor, and a person is not required to respond to, a request for information or an information collection requirement unless the requesting document displays a currently valid OMB control number.

³ An environmental review was also performed of the COL application and its evaluation and conclusions are documented in NUREG-2105, "Final Supplemental Environmental Impact Statement for Combined License (COL) for Enrico Fermi Unit 3."

TABLE OF CONTENTS

ABSTRACT.....	iii

	3.8.5.6	Conclusion.....	3-67
	3.8.6	Special Topics	3-67
3.9		Mechanical Systems and Components	3-68
	3.9.1	Introduction	3-68
	3.9.2	Summary of Application.....	3-68
	3.9.3	Regulatory Basis	3-73
	3.9.4	Technical Evaluation	3-74
	3.9.5	Post Combined License Activities.....	3-87
	3.9.6	Conclusion	3-94
3.10		Seismic and Dynamic Qualification of Mechanical and Electrical Equipment	3-94
	3.10.1	Introduction	3-94
	3.10.2	Summary of Application.....	3-95
	3.10.3	Regulatory Basis	3-95
	3.10.4	Technical Evaluation	3-96
	3.10.5	Post Combined License Activities.....	3-99
	3.10.6	Conclusion	3-99
3.11		Environmental Qualification of Mechanical and Electrical Equipment.....	3-99
	3.11.1	Introduction	3-99
	3.11.2	Summary of Application.....	3-100
	3.11.3	Regulatory Basis	3-100
	3.11.4	Technical Evaluation	3-102
	3.11.5	Post Combined License Activities.....	3-107
	3.11.6	Conclusion	3-107
3.12		Piping Design Review	3-108
	3.12.1	Introduction	3-108
	3.12.2	Summary of Application.....	3-108
	3.12.3	Regulatory Basis	3-108
	3.12.4	Technical Evaluation	3-109
	3.12.5	Post Combined License Activities.....	3-109
	3.12.6	Conclusion	3-110
3.13		Threaded Fasteners – ASME B&PV Code Class 1, 2 and 3	3-110
	3.13.1	Introduction	3-110
	3.13.2	Summary of Application.....	3-110
	3.13.3	Regulatory Basis	3-111
	3.13.4	Technical Evaluation	3-112
	3.13.5	Post Combined License Activities.....	3-113
	3.13.6	Conclusion	3-113
4.0		REACTOR.....	4-1
	4.1	Introduction.....	4-1
	4.2	Summary of Application	4-1
	4.3	Regulatory Basis.....	4-1
	4.4	Technical Evaluation.....	4-1
	4.5	Post Combined License Activities	4-2
	4.6	Conclusion.....	4-2

5.0	REACTOR COOLANT SYSTEM AND CONNECTED SYSTEMS	5-1
5.1	Summary Description.....	5-1
5.2	Integrity of Reactor Coolant Pressure Boundary	5-1
5.2.1	Compliance with Codes and Code Cases.....	5-1
5.2.1.1	Compliance with 10 CFR 50.55a	5-1
5.2.1.2	Applicable Code Cases	5-4
5.2.2	Overpressure Protection.....	5-7
5.2.3	Reactor Coolant Pressure Boundary Materials.....	5-7
5.2.4	Preservice and Inservice Inspection and Testing of Reactor Coolant Pressure Boundary.....	5-8
5.2.4.1	Introduction.....	5-8
5.2.4.2	Summary of Application.....	5-8
5.2.4.3	Regulatory Basis	5-8
5.2.4.4	Technical Evaluation.....	5-9
5.2.4.5	Post Combined License Activities	5-12
5.2.4.6	Conclusions	5-12
5.2.5	Reactor Coolant Pressure Boundary Leakage Detection.....	5-12
5.2.5.1	Introduction.....	5-12
5.2.5.2	Summary of Application.....	5-12
5.2.5.3	Regulatory Basis	5-13
5.2.5.4	Technical Evaluation.....	5-13
5.2.5.5	Post Combined License Activities	5-16
5.2.5.6	Conclusion.....	5-16
5.3	Reactor Vessel	5-16
5.3.1	Reactor Vessel Materials.....	5-16
5.3.1.1	Introduction.....	5-16
5.3.1.2	Summary of Application.....	5-16
5.3.1.3	Regulatory Basis	5-17
5.3.1.4	Technical Evaluation.....	5-17
5.3.1.5	Post Combined License Activities	5-19
5.3.1.6	Conclusion.....	5-19
5.3.2	Pressure-Temperature Limits	5-19
5.3.2.1	Introduction.....	5-19
5.3.2.2	Summary of Application.....	5-19
5.3.2.3	Regulatory Basis	5-20
5.3.2.4	Technical Evaluation.....	5-20
5.3.2.5	Post Combined License Activities	5-27
5.3.2.6	Conclusion.....	5-27
5.3.3	Reactor Vessel Integrity	5-27
5.3.3.1	Introduction.....	5-27
5.3.3.2	Summary of Application.....	5-27
5.3.3.3	Regulatory Basis	5-28
5.3.3.4	Technical Evaluation.....	5-28
5.3.3.5	Post Combined License Activities	5-28
5.3.3.6	Conclusion.....	5-28
5.4	Reactor Coolant System Component and Subsystem Design.....	5-29
5.4.1	Introduction	5-29
5.4.2	Summary of Application.....	5-29
5.4.3	Regulatory Basis	5-30
5.4.4	Technical Evaluation	5-30
5.4.5	Post Combined License Activities.....	5-31

	5.4.6	Conclusion	5-31
6.0		ENGINEERED SAFETY FEATURES	6-1
6.1		Design Basis Accident Engineered Safety Feature Materials	6-1
6.2		Containment Systems	6-2
6.3		Emergency Core Cooling Systems	6-2
6.4		Control Room Habitability Systems	6-3
	6.4.1	Introduction	6-3
	6.4.2	Summary of Application	6-3
	6.4.3	Regulatory Basis	6-3
	6.4.4	Technical Evaluation	6-4
	6.4.5	Post Combined License Activities	6-9
	6.4.6	Conclusion	6-9
6.5		Atmospheric Cleanup Systems	6-10
6.6		Preservice and Inservice Inspection and Testing of Class 2 and 3 Components and Piping	6-10
	6.6.1	Introduction	6-10
	6.6.2	Summary of Application	6-10
	6.6.3	Regulatory Basis	6-11
	6.6.4	Technical Evaluation	6-12
	6.6.5	Post Combined License Activities	6-16
	6.6.6	Conclusion	6-17
7.0		INSTRUMENTATION AND CONTROL SYSTEMS	7-1
8.0		ELECTRIC POWER	8-1
8.1		Introduction	8-1
	8.1.1	Introduction	8-1
	8.1.2	Summary of Application	8-1
	8.1.3	Regulatory Basis	8-1
	8.1.4	Technical Evaluation	8-2
	8.1.5	Post Combined License Activities	8-2
	8.1.6	Conclusion	8-2
8.2		Offsite Power System	8-3
	8.2.1	Introduction	8-3
	8.2.2	Summary of Application	8-3
	8.2.3	Regulatory Basis	8-5
	8.2.4	Technical Evaluation	8-6
	8.2.5	Post Combined License Activities	8-21
	8.2.6	Conclusion	8-21
8.3		Onsite Power Systems	8-22
	8.3.1	AC Power System	8-22
	8.3.1.1	Introduction	8-22
	8.3.1.2	Summary of Application	8-22
	8.3.1.3	Regulatory Basis	8-23
	8.3.1.4	Technical Evaluation	8-23
	8.3.1.5	Post Combined License Activities	8-24
	8.3.1.6	Conclusion	8-24
	8.3.2	DC Power Systems	8-25
	8.3.2.1	Introduction	8-25
	8.3.2.2	Summary of Application	8-25
	8.3.2.3	Regulatory Basis	8-26
	8.3.2.4	Technical Evaluation	8-26
	8.3.2.5	Post Combined License Activities	8-28

	8.3.2.6	Conclusion.....	8-28
8.4		Station Blackout.....	8-28
9.0		AUXILIARY SYSTEMS.....	9-1
9.1		Fuel Storage and Handling	9-1
	9.1.1	New Fuel Storage.....	9-1
	9.1.2	Spent Fuel Storage	9-1
	9.1.3	Spent Fuel Cooling and Cleanup System	9-1
	9.1.4	Light Load Handling System (Related to Refueling)	9-2
		9.1.4.1 Introduction.....	9-2
		9.1.4.2 Summary of Application.....	9-2
		9.1.4.3 Regulatory Basis	9-2
		9.1.4.4 Technical Evaluation.....	9-3
		9.1.4.5 Post Combined License Activities	9-5
		9.1.4.6 Conclusion.....	9-5
	9.1.5	Overhead Heavy Load Handling System	9-5
		9.1.5.1 Introduction.....	9-5
		9.1.5.2 Summary of Application.....	9-5
		9.1.5.3 Regulatory Basis	9-6
		9.1.5.4 Technical Evaluation.....	9-6
		9.1.5.5 Post Combined License Activities	9-9
		9.1.5.6 Conclusion.....	9-9
9.2		Water Systems	9-9
	9.2.1	Plant Service Water System	9-9
		9.2.1.1 Introduction.....	9-9
		9.2.1.2 Summary of Application.....	9-10
		9.2.1.3 Regulatory Basis	9-11
		9.2.1.4 Technical Evaluation.....	9-11
		9.2.1.5 Post Combined License Activities	9-19
		9.2.1.6 Conclusion.....	9-19
	9.2.2	Reactor Component Cooling Water System	9-19
	9.2.3	Makeup Water System	9-20
		9.2.3.1 Introduction.....	9-20
		9.2.3.2 Summary of Application.....	9-20
		9.2.3.3 Regulatory Basis	9-21
		9.2.3.4 Technical Evaluation.....	9-21
		9.2.3.5 Post Combined License Activities	9-23
		9.2.3.6 Conclusion.....	9-23
	9.2.4	Potable and Sanitary Water Systems	9-24
		9.2.4.1 Introduction.....	9-24
		9.2.4.2 Summary of Application.....	9-24
		9.2.4.3 Regulatory Basis	9-24
		9.2.4.4 Technical Evaluation.....	9-25
		9.2.4.5 Post Combined License Activities	9-28
		9.2.4.6 Conclusion.....	9-28
	9.2.5	Ultimate Heat Sink.....	9-29
		9.2.5.1 Introduction.....	9-29
		9.2.5.2 Summary of Application.....	9-29
		9.2.5.3 Regulatory Basis	9-29
		9.2.5.4 Technical Evaluation.....	9-30
		9.2.5.5 Post Combined License Activities	9-32
		9.2.5.6 Conclusion.....	9-32

9.2.6	Condensate Storage and Transfer System.....	9-32
9.2.6.1	Introduction.....	9-32
9.2.6.2	Summary of Application.....	9-33
9.2.6.3	Regulatory Basis	9-33
9.2.6.4	Technical Evaluation.....	9-33
9.2.6.5	Post Combined License Activities	9-35
9.2.6.6	Conclusion.....	9-35
9.2.7	Chilled Water System.....	9-35
9.2.8	Turbine Component Cooling Water System.....	9-35
9.2.9	Hot Water System	9-36
9.2.10	Station Water System.....	9-36
9.2.10.1	Introduction.....	9-36
9.2.10.2	Summary of Application.....	9-36
9.2.10.3	Regulatory Basis	9-36
9.2.10.4	Technical Evaluation.....	9-37
9.2.10.5	Post Combined License Activities	9-38
9.2.10.6	Conclusion.....	9-38
9.3	Process Auxiliaries	9-38
9.3.1	Compressed Air Systems	9-38
9.3.2	Process Sampling System.....	9-39
9.3.2.1	Introduction.....	9-39
9.3.2.2	Summary of Application.....	9-39
9.3.2.3	Regulatory Basis	9-39
9.3.2.4	Technical Evaluation.....	9-40
9.3.2.5	Post Combined License Activities	9-42
9.3.2.6	Conclusion.....	9-42
9.3.3	Equipment and Floor Drain System.....	9-42
9.3.4	Chemical and Volume Control System	9-43
9.3.5	Standby Liquid Control System	9-43
9.3.5.1	Introduction.....	9-43
9.3.5.2	Summary of Application.....	9-43
9.3.5.3	Regulatory Basis	9-44
9.3.5.4	Technical Evaluation.....	9-44
9.3.5.5	Post Combined License Activities	9-45
9.3.5.6	Conclusion.....	9-45
9.3.6	Instrument Air System	9-46
9.3.7	Service Air System	9-46
9.3.8	High Pressure Nitrogen Supply System.....	9-46
9.3.9	Hydrogen Water Chemistry System.....	9-47
9.3.9.1	Introduction.....	9-47
9.3.9.2	Summary of Application.....	9-47
9.3.9.3	Regulatory Basis	9-48
9.3.9.4	Technical Evaluation.....	9-48
9.3.9.5	Post Combined License Activities	9-50
9.3.9.6	Conclusion.....	9-50
9.3.10	Oxygen Injection System.....	9-51
9.3.10.1	Introduction.....	9-51
9.3.10.2	Summary of Application.....	9-51
9.3.10.3	Regulatory Basis	9-51
9.3.10.4	Technical Evaluation.....	9-51
9.3.10.5	Post Combined License Activities	9-52

	9.3.10.6	Conclusion.....	9-52
	9.3.11	Zinc Injection System	9-52
	9.3.12	Auxiliary Boiler System.....	9-53
9.4		Heating, Ventilation, and Air Conditioning	9-53
9.5		Other Auxiliary Systems.....	9-54
	9.5.1	Fire Protection System	9-54
	9.5.1.1	Introduction.....	9-54
	9.5.1.2	Summary of Application.....	9-54
	9.5.1.3	Regulatory Basis	9-57
	9.5.1.4	Technical Evaluation.....	9-58
	9.5.1.5	Post Combined Licensing Activities	9-67
	9.5.1.6	Conclusion.....	9-68
	9.5.2	Communication Systems.....	9-69
	9.5.2.1	Introduction.....	9-69
	9.5.2.2	Summary of Application.....	9-69
	9.5.2.3	Regulatory Basis	9-70
	9.5.2.4	Technical Evaluation.....	9-70
	9.5.2.5	Post Combined License Activities	9-77
	9.5.2.6	Conclusion.....	9-77
	9.5.3	Lighting System.....	9-78
	9.5.4	Diesel Generator Fuel Oil Storage and Transfer System	9-78
	9.5.4.1	Introduction.....	9-78
	9.5.4.2	Summary of Application.....	9-79
	9.5.4.3	Regulatory Basis	9-79
	9.5.4.4	Technical Evaluation.....	9-79
	9.5.4.5	Post Combined License Activities	9-82
	9.5.4.6	Conclusion.....	9-82
	9.5.5	Diesel Generator Jacket Cooling Water System.....	9-83
	9.5.6	Diesel Generator Starting Air System	9-83
	9.5.7	Diesel Generator Lubrication System	9-83
	9.5.8	Diesel Generator Combustion Air Intake and Exhaust System	9-83
10.0		STEAM AND POWER CONVERSION SYSTEM.....	10-1
10.1		Summary Description.....	10-1
10.2		Turbine Generator	10-1
	10.2.1	Introduction	10-1
	10.2.2	Summary of Application.....	10-1
	10.2.3	Regulatory Basis	10-2
	10.2.4	Technical Evaluation	10-3
	10.2.5	Post Combined License Activities.....	10-11
	10.2.6	Conclusion	10-11
10.3		Turbine Main Steam Supply System.....	10-12
10.4		Other Features of Steam and Power Conversion System	10-12
	10.4.1	Main Condenser.....	10-13
	10.4.2	Main Condenser Evacuation System.....	10-13

ABBREVIATIONS

A&NS	alert and notification system
A2LA	American Association for Laboratory Accreditation
ABWR	advanced boiling-water reactor
ac	alternating current
ACA	Anorthosite Complex Anomaly
ACES	Automated Coastal Engineering System
ACLASS	ACLASS Accreditation Services
ACI	American Concrete Institute
ACP	access control point
ACRS	Advisory Committee on Reactor Safeguards
ADAMS	Agencywide Documents Access and Management System
ADB	ancillary diesel building
ADG	ancillary diesel generator
ADS	automatic depressurization system
AEA	Atomic Energy Act
AEOF	Alternate EOF
AF	amplitude function
AFT	as-found tolerance
AFU	air filtration unit
AHEX	Atlantic Highly Extended
AHS	auxiliary heat sink
ALARA	as low as reasonably achievable
ALT	as-left tolerance
ANI	American Nuclear Insurers
ANS	American Nuclear Society
ANSI	American National Standards Institute
ANSS	Advanced National Seismic System
AOO	anticipated operational occurrence
AOV	air-operated valve
API	American Petroleum Institute
AQCR	Air Quality Control Region
ART	adjusted reference temperature
ASA	applicable safety analysis
ASHRAE	American Society of Heating, Refrigerating, and Air-Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASCE	American Society of Civil Engineers
ASR	alkali-silica reaction
ASTM	American Society of Testing and Materials
ATWS	anticipated transient without scram
AV	allowable value

B&V	Black & Veatch
BDBE	beyond-design-basis event
BE	best estimate
BL	bulletin
bpf	blows per foot
BPV	Boiler and Pressure Vessel
BPVC	Boiler and Pressure Vessel Code
BRE	bullet resisting enclosure
BTP	branch technical position
Btu	British thermal unit
BWR	boiling-water reactor
C	Celsius
cc	Cubic-centimeters
C&FS	condensate and feedwater system
CAM	continuous air monitor
CAR	corrective action request
CAS	central alarm station
CAV	cumulative absolute velocity
CB	control building
CD-144	card deck-144 (format used in NCDC meteorological data)
CDA	critical digital asset
CDF	core damage frequency
CDI	conceptual design information
CEM	Coastal Engineering Manual
CENA	central and eastern North America
CEUS	central and eastern United States
CEUSSSC	Central and Eastern United States Seismic Source Characterization
CF	chemistry factor
cfm	cubic feet per minute
CFR	<i>Code of Federal Regulations</i>
CHS	Charleston
CHV	Charlevoix
CIRC	circulating water system
CLSM	controlled low-strength material
cm	centimeter(s)
CMZ	Commerce fault zone
COCORP	Consortium for Continental Reflection Profiling
COL	combined license
COLA	combined license application
COLR	Core Operating Limits Report
COOP	Cooperative Observation Program
CPS	condensate purification system
CR	control room
CRD	control rod drive

CRHA	control room habitability area
CS&TS	condensate storage and transfer system
CSAT	Cyber Security Assessment Team
CSDRS	certified seismic design response spectra
CSF	condensate storage facility
CSIRT	Cyber Security Incident Response Team
CSP	cyber security plan
CST	condensate storage tank
CVAP	Comprehensive Vibration Assessment Program
CWS	circulating water system
DAC	design acceptance criteria
DAW	dry active waste
DB	dry bulb
DBA	design-basis accident
DBE	design-basis event
DBT	design-basis threat
DBT	design basis tornado
DC	design certification
dc	direct current
DCA	Design certification application
DCD	design control document
DCF	damping correction factor
DCIS	distributed control and information system
DCR	design certification rule
DCRA	Design Centered Review Approach
DE	deaggregation earthquakes
DEM	digital elevation model
DG	diesel generator
DGFOSTS	diesel generator fuel oil storage and transfer system
DM	direct method
DOE	Department of Energy
DOT	Department of Transportation
DPV	depressurization valve
D-RAP	design reliability assurance program
DTE	Detroit Edison Company
DTPG	defined test plan group
DZO	depleted zinc oxide
EAB	exclusion area boundary
EAC	emergency alternating current
EAL	emergency action level
EAS	emergency alert system
ECC-AM	Extended Continental Crust – Atlantic Margin
ECCS	emergency core cooling system

ECGH	East Continent Gravity High
ECL	effluent concentration limit
ECRS	east continent rift system
ED	emergency director
EDG	emergency diesel generator
EF	Enrico Fermi
ELAP	extended loss of alternating current power
EMD	emergency management division
EMDG	extensive damage mitigation guideline
EMI	electromagnetic interference
EMS	emergency medical service
ENS	emergency notification system
EOC	emergency operations center
EOF	emergency operations facility
EOL	end of life
EOP	emergency operating procedure
EP	emergency planning
EP	Emergency Preparedness
EP ITAAC	emergency planning inspections, tests, analyses, and acceptance criteria
EPA	Environmental Protection Agency
EPAct	Energy Policy Act of 2005
EPG	emergency procedure guideline
EPIP	Emergency Plan Implementing Procedure
EPRI	Electric Power Research Institute
EPZ	emergency planning zone
EQ	environmental qualification
EQD	environmental qualification document
EQMEL	Environmental Qualification Master Equipment List
ER	environmental report
ERDS	emergency response data system
ERF	emergency response facility
ERM-N	Eastern Rift Margin – North
ERM-S	Eastern Rift Margin – South
ERO	emergency response organization
ESBWR	economic simplified boiling-water reactor
ESF	engineered safety feature
ESP	early site permit
ETE	evacuation time estimate
ETS	emergency telecommunications system
E _{ur}	unload-reload modulus
F	Fahrenheit
FAC	flow-accelerated corrosion
FAPCS	fuel and auxiliary pools cooling system

FATT	fracture appearance transition temperatures
FB	fuel building
FDA	Final Design Approval
FE	finite element
FEA	finite element analysis
FEIS	Final Environmental Impact Statement
FEM	finite element model
FEMA	Federal Emergency Management Agency
FERC	Federal Energy Regulatory Commission
FFD	fitness for duty
FFS	free flow speed
FHA	fire hazards analysis
FHA	fuel handling accident
FIRS	foundation input response spectra
FIV	flow-induced vibration
FLEX	diverse and flexible coping strategy
FMG	failure mode group
FNPP	Fermi Nuclear Power Plant
FPS	fire protection system
FPWS	fire protection water system
FR	Federal Register
FRMAC	Federal Radiological Monitoring and Assessment Center
FRPP	fiberglass reinforced polyester pipe
FRS	floor response spectra
FS	factor of safety
FSAR	final safety analysis report
FSER	final safety evaluation report
ft	feet/foot
FTS	Federal Technology Services
FWSC	fire water service complex
g	acceleration of gravity
Ga	billion years ago
GALL	generic aging lessons learned
GCRP	Global Change Research Program
GDC	general design criterion/criteria
GDCS	gravity-driven cooling system
GE	General Electric
GEH	General Electric – Hitachi (Nuclear Energy)
GFTZ	Grenville Front Tectonic Zone
GI	generic issue
GIA	glacial isostatic adjustment
GL	generic letter
GLERL	Great Lakes Environmental Research Laboratory
GLIMPCE	Great Lakes International Multidisciplinary Program on Crustal Evolution

GMH	Great Meteor Hotspot
GMM	ground motion model
GMPE	ground motion prediction equation
GMRS	ground motion response spectrum
gpm	gallons per minute
GPS	global positioning system
GSI	generic safety issue
GSI	geological strength index
GTG	generic technical guidance
GTS	generic technical specification
GWMS	gaseous waste management system
hr	hour
HAB	hostile action based
HCLPF	high confidence of low probability of failure
HCM	Highway Capacity Manual
HCU	hydraulic control unit
HEC	Hydrological Engineering Centers
HEC-HMS	Hydrological Engineering Centers-Hydrological Modeling System
HEPA	high-efficiency particulate air
HF	high frequency
HFE	human factors engineering
HFI	human factor issue
HMR	Hydrometeorological Report
HMS	Hydrological Modeling System
HPM	human performance monitoring
HPN	Health Physics Network
HPS	Health Physics Society
HRA	human reliability analysis
HUSWO	Hourly U.S. Weather Observations
HVAC	heating, ventilation, and air conditioning
HWCS	hydrogen water chemistry system
Hz	Hertz
I&C	instrumentation and control
IAS	International Accreditation Service
IBC	International Building Code
IBEB	Illinois Basin Extended Basement
IC	isolation condenser
IC/PCC	isolation condenser/passive containment cooling system
ICS	isolation condenser system
IE	inspection and enforcement
IEC	International Electrotechnical Commission
IEEE	Institute of Electrical and Electronic Engineers
IFR	Interim finding report

IGLD	International Great Lakes Datum
ILAC	International Laboratory Accreditation Cooperation
IN	information notice
in.	inch(es)
INPO	Institute of Nuclear Power Operations
IPCS	integrated plant computer system
IR	intermediate range
ISFSI	independent spent fuel storage installation
ISG	interim staff guidance
ISHD	Integrated Surface Hourly Data
ISI	inservice inspection
IST	inservice testing
ITAAC	Inspections, tests, analyses, and acceptance criteria
ITC	International Transmission Company
ITP	initial test program
ITS	International Transmission Company
JFD	joint frequency distribution
JIC	joint public information center
JLD	Japan lesson-learned project directorate
JPIC	joint information center
ka	thousand years ago
KI	potassium iodide
km	kilometer(s)
kPa	kilopascals
kV	kilovolt
L-A-B	Laboratory Accreditation Bureau
LAN	local area network
LB	lower-bound
lb/ft ²	pounds per square-foot
LCO	limiting condition for operation
LF	low frequency
LiDAR	light detection and ranging
LLEA	local law enforcement agency
LLNL	Lawrence Livermore National Laboratory
LLRW	low-level radioactive waste
LOA	Letters of Agreement
LOCA	loss-of-coolant accident
LOLA	loss of large area
LOOP	loss-of-offsite power
LOPP	loss of preferred power
Lpm	liter per minute
LPZ	low population zone

LR	lower-range
LSS	low strategic significance
LTOP	low temperature overpressure protection
LTR	licensing topical report
LTSP	limiting trip setpoint
LWMS	liquid waste management system
LWR	light water reactor
M	magnitude (earthquake)
m	meter(s)
M&TE	measuring and test equipment
Ma	million years ago
MASR	minimum alternating stress ratio
MBtu	one million BTU
MC&A	material control and accounting
MCL	management counterpart link
MCPR	minimum critical power ratio
MCR	main control room
MCWB	mean coincident wet-bulb
MDCH	Michigan Department of Community Health
MDCT	mechanical draft cooling tower
MDEQ	Michigan Department of Environmental Quality
MEB	modified energy balance
MEI	maximally exposed individual
MEMP	Michigan Emergency Management Plan
MGA	Mid-Michigan Gravity Anomaly
MHz	megahertz
m_i	material index
mi	mile(s)
MIDC	Midcontinent-Craton
MIS	marine isotope stage
MJ	megajoules
MMGH	Mid-Michigan Gravity High
MMIS	man-machine interface system
MMP	Meteorological Monitoring Program
MOA	Memorandum of Agreement
MOU	Memorandum of Understanding
MOV	motor-operated valve
MPa	megapascals
MPaG	megapascals gauge
mph	miles per hour
MPSC	Michigan Public Service Commission
MR	maintenance rule
MRA	Mutual Recognition Arrangement
MRCSP	Midwest Regional Carbon Sequestration Partnership

Mrem	millirem
MRS	midcontinent rift system
MSM	modified subtraction method
MST	mitigative strategies table
MW	megawatt
NAAQS	National Ambient Air Quality Standards
NACE	National Association of Corrosion Engineers
NAP	Northern Appalachian
NAVD	North American Vertical Datum
NCDC	National Climatic Data Center
NCS	nuclear criticality safety
ND	Nuclear Development
ND QAPD	Nuclear Development Quality Assurance Program document
N-DCIS	nonsafety-related distributed control and information system
NDCT	natural draft cooling tower
NDE	nondestructive examination
NDT	nil ductility temperature
NEDB	National Earthquake Database
NEHRP	National Earthquake Hazards Reduction Program
NEI	Nuclear Energy Institute
NEIC	National Earthquake Information Center
NERC	National Electric Reliability Council
NESC	National Electrical Safety Code
NFEMP	Nuclear Facilities Emergency Management Plan
NFPA	National Fire Protection Association
NGA	Next Generation Attenuation
NGVD	National Geodetic Vertical Datum
NIRMA	Nuclear Information and Records Management Association
NIST	National Institute of Standards and Technology
NMF	New Madrid fault
NMFS	New Madrid fault system
NMSZ	New Madrid Seismic Zone
NNE	north-northeast
NOAA	National Oceanic and Atmospheric Administration
NOC	Nuclear Operations Center
NOMMAD	Northwest Ohio and Michigan Mutual Aid District
NOV	notice of violation
NPHS	normal power heat sink
NQA	nuclear quality assurance
NRC	Nuclear Regulatory Commission
NRCS	Natural Resources Conservation Service
NRO	Office of New Reactors
NS	nonseismic

SLCS	standby liquid control system
SLR	St. Lawrence Rift
SM	subtraction method
SNM	Special Nuclear Material
SNMPPP	Special Nuclear Material Physical Protection Plan
SOG	Seismic Owners Group
SPDS	safety parameter display system
SPT	standard penetration test
SR	surveillance requirement
SRI	select rod insert
SRM	staff requirements memorandum
SRO	senior reactor operator
SRP	Standard Review Plan
SRV/SV	safety relief valve/safety valve
SSC	structure, system, and component
SSE	safe-shutdown earthquake
SSEMP	Safety, Security and Emergency Planning
SSEP	safety, security, and emergency preparedness
SSHAC	Senior Seismic Hazard Analysis Committee
SSI	soil-structure interaction
SSSI	structure-soil-structure interaction
SSW	south-southwest
Std	Standard
STS	standard technical specifications
SUNSI	Sensitive Unclassified Non-Safeguards Information
Sv	Sievert
SWDS	sanitary waste discharge system
SWMS	solid waste management system
SWS	station water system

SWST	station water storage tank
T&QP	Training and Qualification Plan
TAF	top of active fuel
TB	turbine building
TBS	turbine bypass system
TCCWS	turbine component cooling water system
TCP	traffic control point
TEDE	total effective dose equivalent
TG	Technical Guide
TGCS	turbine generator control system
TGSS	turbine gland seal system
THA	time-history accelerograph
TLD	thermoluminescent dosimeter
TMI	Three Mile Island
TMSS	turbine main steam system
TR	technical report
TS	technical specifications
TSC	technical support center
TSCR	truncated soil column response
TSCVS	technical support center heating, ventilation, and air conditioning subsystem
TSTF	Technical Specifications Task Force
UAT	unit auxiliary transformer
UB	upper-bound
UC	unconfined compression
UHF	ultra high frequency
UHRs	uniform hazard response spectra
UHS	ultimate heat sink
UPS	uninterruptible power supply
UR	upper-range
US	United States
USACE	U.S. Army Corps of Engineers
US-APWR	U.S. Advanced Pressurized Water Reactor
USCG	United States Coast Guard
USGS	United States Geological Survey
USI	unresolved safety issue
USNRC	United States Nuclear Regulatory Commission
UT	ultrasonic technique
UTM	Universal Transverse Mercator
V&V	verification and validation
V	volt
V/H	vertical-to-horizontal

Vac	volt alternating current
VBS	vehicle barrier system
Vdc	volt direct current
VHRA	very high radiation area
V_p	compression wave velocity
Vpc	volt per cell
V_s	shear wave velocity
WB	wet bulb
WBG	wet bulb globe temperature
WNA	Western North America
WV	Wabash Valley
WVSZ	Wabash Valley Seismic Zone
ZIS	zinc injection system

APPENDIX B

CHRONOLOGY OF THE COMBINED LICENSE APPLICATION FOR FERMI UNIT 3

This appendix contains a chronological listing of routine licensing correspondence between the staff of the U.S. Nuclear Regulatory Commission (NRC) regarding the review of the Fermi 3 plant design under Docket No. 052-000033.

Document Date	Accession Number	Title & Estimated Page Count	Document Type	Author Affiliation	Addressee Affiliation	Docket Number

APPENDIX C ELECTRONIC REQUEST FOR ADDITIONAL INFORMATION DATABASE

The following notes pertain to the table on the proceeding pages:

- The request for additional information (RAI) question numbers were assigned based on the section of the Standard Review Plan (SRP) that was associated with the question (e.g., question 02.01.02-1 was generated based on the staff's review of the application against Section 2.1.2 of the SRP).
- The NRC letter number is a unique number that was assigned to the letter that transmitted the RAIs to the applicant.
- The applicant's responses to security-related and sensitive information questions (e.g., physical security) are not publically available.
- If the applicant provides multiple responses to a question, the responses are chronologically listed under the question entries.

REPORT BY THE ADVISORY COMMITTEE ON REACTOR SAFEGUARDS

UNITED STATES NUCLEAR REGULATORY COMMISSION ADVISORY COMMITTEE ON REACTOR SAFEGUARDS WASHINGTON, DC 20555 - 0001

September 22, 2014

The Honorable Allison M. Macfarlane
Chairman
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

SUBJECT: REPORT ON THE SAFETY ASPECTS OF THE DTE ELECTRIC COMPANY
COMBINED LICENSE APPLICATION FOR FERMI UNIT 3

Dear Chairman Macfarlane:

During the 617th meeting of the Advisory Committee on Reactor Safeguards (ACRS), September 4-6, 2014, we reviewed the NRC staff's Advanced Safety Evaluation Report (ASER) for the DTE Electric Company (DTE or the applicant) combined license application (COLA) for Fermi Unit 3. This application conforms to the design-centered review approach (DCRA).¹ DCRA, which is Commission policy, allows the staff to perform one technical review and reach a decision for a reference COLA addressing issues outside the scope of the design certification and to use this review and decision as a reference to support decisions on other subsequent COLAs. The reactor design selected for Fermi Unit 3 is the 1520 MWe passive Economic Simplified Boiling Water Reactor (ESBWR). Fermi Unit 3 is the reference COLA for that design.

Our ESBWR Subcommittee held six meetings (May 26, 2011; October 21, 2011; November 30, 2011; August 16, 2012; July 7, 2014; and August 20, 2014) to review the COLA and the staff's ASER. During our meetings, we met with representatives of the NRC staff, DTE and its vendors, and the public. We also had the benefit of the documents referenced. This letter fulfills the requirement of 10 CFR 52.87 that the ACRS report on those portions of the application that concern safety.

CONCLUSIONS AND RECOMMENDATION

1. There is reasonable assurance that Fermi Unit 3 can be built and operated without undue risk to the health and safety of the public. The COLA for Fermi Unit 3 should be approved following its final revision.

¹ The DCRA is described in Regulatory Issue Summary (RIS) 2006-06, "New Reactor Standardization Needed to Support the Design-Centered Licensing Review Approach," as endorsed by the Commission's Staff Requirements Memorandum in response to SECY-06-0187, "Semiannual Update of the Status of New Reactor Licensing Activities and Future Planning for New Reactors," dated November 16, 2006.

2. There is reasonable assurance that the ESBWR design and the Fermi Unit 3 site satisfy the requirements resulting from the Fukushima Near-Term Task Force recommendations. However, this review has identified generic issues related to seismic reevaluations, mitigating strategies, and spent fuel pool instrumentation. Further action by the staff is needed to resolve these issues not only for Fermi Unit 3, but also for currently operating plants and other combined license applicants.

BACKGROUND

On September 18, 2008, DTE submitted an application to the NRC for a combined license to construct and operate Fermi Unit 3 in accordance with the requirements of 10 CFR Part 52, "Licenses, Certifications, and Approvals for Nuclear Power Plants." In the application, DTE stated that the Fermi Unit 3 reactor will be an ESBWR located at the existing site. The Fermi application is based on Revision 10 of the ESBWR design control document (DCD).

DISCUSSION

The Fermi site is located in Monroe County, Michigan, 30 miles southwest of Detroit. Fermi Unit 1 is decommissioned and is in a SAFESTORE status. Fermi Unit 2 is an operating boiling water reactor. Fermi Unit 3 is proposed to be located on the same site, southwest of Fermi Unit 2.

DEPARTURES FROM THE ESBWR DCD

The Fermi Unit 3 COLA identified only one departure from the ESBWR design. The ESBWR DCD states that on-site storage space for a six-month volume of packaged waste is provided in the Radwaste Building. The Fermi Unit 3 Radwaste Building is configured to accommodate a minimum of ten years volume of packaged Class B and C waste, while maintaining space for at least three months of packaged Class A waste. This departure involves a redesign of the Radwaste Building that affects the arrangement of systems and components within the building volume. The systems and components requiring modifications are associated with the liquid waste management system and the solid waste management system. The applicant stated that the existing Radwaste Building fire protection and HVAC systems have sufficient capacity to accommodate the extra volume of Class B and C wastes, and require no modification. The staff has approved this departure and we concur.

SITE CHARACTERISTICS

Site characteristics include potential hazards in proximity of the plant as well as meteorology, hydrology, geology, seismology, and geotechnical parameters. An applicant must show that the actual site characteristics are bounded by the site parameters for the certified design.

Water Sources

There are two categories of surface water use: withdrawal² (non-consumptive) and consumption.³ Groundwater is not used at Fermi. Lake Erie is the principal source of water for the operation of Fermi Unit 3. The most important Lake Erie parameter with respect to water use is the lake water level. Fermi Unit 3 has been designed to operate at full capacity assuming the lowest historical water level at the plant intake basin. In addition, the safety-related ultimate heat sink does not require makeup for at least 72 hours, and the onsite fire protection system contains sufficient supplemental water to maintain core cooling and spent fuel pool cooling for at least 7 days.

Flooding

The applicant followed current regulatory guidance to determine the probable maximum flood, the probable maximum precipitation, and flood design considerations for the site and showed that the maximum flood level for Fermi Unit 3 satisfies the enveloping site parameters in the DCD. The Fermi site is located outside the realm of significant impact due to flooding from local streams and rivers. The most severe potential flooding condition at the Fermi Unit 3 site involves a storm-related high surge from Lake Erie.

According to ANS/ANSI-2.8-1992, the calculated probable maximum water surge and seiche is based on a probable maximum wind storm (PMWS). The standard indicates that analysis parameters for the PMWS should be determined by a meteorological study. In lieu of a study, the following standard values may be used for the area of the Great Lakes in the vicinity of the site:

- set maximum over-water wind speed to ~ 160 km/hr (100 mph),
- set lowest pressure within the PMWS to ~ 950 mbar,
- apply a most critical, constant translational speed during the life of the PMWS,
- assume that wind speeds over water vary diurnally from 1.3 (day) to 1.6 (night) times the overland speed, and
- assume that winds blow 10 degrees across the isobars over the water body.

In order to determine the maximum postulated flood level at the site, the predicted storm surge was combined with the Lake Erie 100-year high water level. Storm simulation and coastal engineering models were used to calculate the run-up that occurs when waves encounter a shoreline or embankment. The analysis shows that the maximum flood level for Fermi Unit 3 satisfies the enveloping site parameter in the ESBWR DCD.

² "Withdrawal" refers to water drawn from surface or groundwater sources that is eventually returned to the area from where it came.

³ "Consumption" refers to water that is withdrawn but not returned to the region.

Historically, southwest-to-northeast winds have created seiches with large waves on Lake Erie, sometimes causing flooding on eastern shores. The staff examined the historical events and determined that such large waves do not affect southwestern areas of the coast. The staff reviewed the flooding analysis submitted by DTE and found it to be acceptable.

High Winds and Tornadoes

DTE performed an assessment of the tornado and hurricane wind speeds that may occur at the Fermi site. That assessment demonstrated that site-specific wind speeds are bounded by the wind loads that are applied for the ESBWR design. According to ESBWR DCD Table 2.0-1, hurricane-generated missiles must be evaluated for seismic Category NS and Category II structures that house Regulatory Treatment of Non-Safety Systems (RTNSS) equipment. The DTE analyses confirmed that the impacts from site-specific hurricane missiles are bounded by the ESBWR design parameters.

ESBWR DCD Table 2.0-1 also specifically notes that tornado missiles do not apply to seismic Category NS and Category II buildings. Therefore, tornado-generated missiles that may impact structures that contain RTNSS equipment are not evaluated for the ESBWR design, and they are not evaluated as part of the site-specific analyses. ESBWR DCD Table 19A-4 notes that the Ancillary Diesel Generator Building and the Turbine Building structures are designed for tornado wind loads. The Electrical Building, Service Water Building, and Plant Service Water Structures are designed for hurricane wind loads. However, for wind-driven missiles, all of these buildings are designed only to withstand the design-basis hurricane missiles.

Because the ESBWR design can maintain passive core cooling, containment functions, and spent fuel cooling for at least 72 hours without any AC power, operation of RTNSS equipment is not required until approximately 72 hours after the plant is shut down. However, because of this inconsistency in the wind-driven missile analyses, it is unclear that structures which house RTNSS equipment that is credited for mitigation of beyond-design-basis external events will survive site-specific tornado-generated missiles. We note that the FLEX national response centers are intended to provide support for defense-in-depth mitigating strategies if onsite RTNSS equipment is not available after 72 hours.

Local Geology

One topic of discussion was the approach that the applicant used to justify the low probability of potential dissolution voids (karst) in the bedrock at the Fermi Unit 3 site. The applicant noted that karst formation is less likely in areas that have been formerly covered by ice sheets and are now covered by glacial deposits, because glaciers typically eroded away carbonate material or filled in existing karst features. The applicant also noted the absence of large voids or cavities due to dissolution in the subsurface investigations at the Fermi 3 site and the absence of any large voids or cavities in bedrock exposures at the nearby Denniston Quarry. The staff determined that the applicant has adequately justified the conclusion that the evidence supports a low probability of karst formation at the site.

To further substantiate that there are no subsurface faults or deformation features that could cause a hazard, the staff developed a generic license condition that has been applied to all new plant COLAs, requiring the applicant to map and evaluate the bedrock surface exposed during site excavation. For Fermi Unit 3, this would involve all safety-related structures including the nuclear island excavations and should identify solutioned bedrock. The relief of the mapped bedrock surfaces will provide important evidence of the presence of hidden voids in these rocks. Any identification of potential solutioned bedrock will necessarily lead to further study by both direct sampling as well as remote sensing.

Offsite Power Supplies

Fermi Unit 3 is connected to the offsite power grid by three 345kV transmission lines. Fermi Unit 2 is connected to the grid by two 345kV transmission lines and three 120kV transmission lines. All of these transmission lines are routed through a common corridor for approximately four miles before the lines diverge and are routed to separate offsite power substations. The Unit 2 transmission lines also pass through the Unit 3 switchyard, but do not have any connections in that switchyard. The transmission line allocations to specific towers and the spacing of the 345kV towers and 120kV towers in the common corridor ensure that at least one 345kV power supply will remain available to each unit following structural damage to any tower line. This configuration satisfies current regulations for physical and electrical separation of redundant offsite power connections for each unit.

The offsite power transmission lines are vulnerable to damage by high winds or other storm-related conditions that may affect the common corridor. Damage to the offsite power supplies for Unit 3 is mitigated by the ESBWR design features that include two non-safety-related standby diesel generators and two non-safety-related ancillary diesel generators. The availability and reliability of these diesel generators are managed by RTNSS controls. Furthermore, the ESBWR design can maintain passive core cooling, containment functions, and spent fuel cooling for at least 72 hours without any AC power. Considering these design features, we conclude that there is reasonable assurance that plant safety can be maintained with this offsite power transmission line configuration.

FUKUSHIMA REQUIREMENTS

Seismic Reevaluation

In 2011, the NRC Near-Term Task Force (NTTF) issued a series of recommendations for improving nuclear power plant safety in the U.S. following the Fukushima earthquake and tsunami. Recommendation 2.1 stated that plants should reevaluate the seismic hazards at their sites against current NRC requirements and guidance. The NRC issued a letter dated March 12, 2012, requesting that all operating nuclear power plants in the U.S. reevaluate seismic hazards using the most recent information and methodologies available. The letter stated that nuclear power plant sites in the Central and Eastern U.S. (CEUS) should use the seismic source model in NUREG-2115, "Central and Eastern United States Seismic Source Characterization for Nuclear Facilities," to characterize their seismic hazards. Following the issuance of this letter to the operating nuclear power plants, the staff also requested that all combined license and early site permit applicants address this issue.

To address NTTF Recommendation 2.1, the staff requested additional information from DTE pertaining to the seismic hazard evaluation. The staff asked DTE to reassess the calculated seismic hazard for the Fermi Unit 3 site using the NUREG-2115 seismic source model and to modify its ground motion response spectra and foundation input response spectra as needed.

To supplement the seismic sources that are evaluated in NUREG-2115, DTE compiled records of additional earthquakes that occurred within 320 km of the Fermi site between 2009 and 2012. In accordance with the methods in NUREG-2115, they then screened out earthquakes with moment magnitudes below 2.9. The compilation and screening assessments considered all possible causes for the earthquakes (e.g., natural ground motion, injection wells, hydraulic fracking). All earthquakes with moment magnitudes of 2.9 or above were included in the updated seismic catalog. DTE appropriately accounted for the additional earthquake experience during this interval.

In February 2013, the applicant submitted Revision 5 of the Fermi Unit 3 Final Safety Analysis Report that describes the updated seismic hazard analyses. The staff concluded that the applicant has adequately addressed the required information and has evaluated the seismic hazards at the Fermi Unit 3 site against the current state of knowledge and the NRC requirements.

We agree that the ESBWR seismic design requirements provide adequate margins above the Fermi Unit 3 site-specific hazard. However, we have observed anomalies in the calculated variations of uncertainty with ground motion frequency at Fermi and other sites. We will work with the staff to better understand the analysis methods and computations, since they can affect the seismic hazard assessments for currently operating plants and other combined license applicants.

Despite the ongoing discussions with the staff about the variation of uncertainty with ground motion frequency, the ESBWR seismic design requirements provide adequate margins above the Fermi Unit 3 site-specific seismic hazard. Therefore, we have reasonable assurance of Fermi Unit 3 safety against design basis seismic events.

Seismic Design and Category I Structures

Safety-related structures, systems, and components are designed to withstand safe-shutdown earthquake loads and other dynamic loads, including wind loads, missiles, and those due to reactor building vibration caused by suppression pool dynamics. The ESBWR standard plant design parameters envelope the Regulatory Guide 1.60, Revision 1, ground spectra anchored to 0.3 g and high-frequency hard rock spectra anchored to 0.5 g peak ground acceleration. Based on the updated seismic hazard and Fermi Unit 3 site-specific soil-structure interaction analyses, the applicant developed site-specific seismic inputs consisting of performance-based surface response spectra, foundation input response spectra, site-specific ground motion time histories, and subsurface material profiles with corresponding dynamic properties used in the site-specific soil-structure interaction analyses.

The site-specific foundation input response spectra are enveloped by the ESBWR certified seismic design response spectra in both horizontal and vertical directions. The applicant also performed analyses to address the following Fermi Unit 3 site-specific conditions: (1) to confirm that the ESBWR standard plant design is applicable to the Fermi Unit 3 site-specific conditions, where some structures are partially embedded in the rock base, with an engineered granular backfill surrounding the structures from the top of the rock to the grade level of the plant; and (2) to confirm that the standard plant design is applicable even though the DCD requirements for the engineered granular backfill that surrounds the seismic Category I structures are not met in all cases.

The site-specific structural models for the reactor and fuel buildings used accepted analytical practices (e.g., plate finite elements arranged in a uniform mesh that was used to represent the exterior walls below grade and basemats). The staff reviewed the seismic design and accepted the adequacy of the structural response to the revised seismic source term. All nuclear safety issues relating to the seismic design and the seismic Category I structural response have been resolved.

Mitigation Strategies for Beyond-Design-Basis External Events

To address NTF Recommendation 4.2 regarding mitigation strategies for beyond-design-basis external events, NRC Order EA-12-049 outlines a three-phase approach. The initial phase requires the use of installed equipment and resources to maintain or restore core cooling, containment, and spent fuel pool cooling without AC power. The transition phase requires providing sufficient, portable, onsite equipment and consumables to maintain or restore these functions until they can be accomplished with resources brought from offsite. The final phase requires obtaining sufficient offsite resources to sustain those functions indefinitely. The staff has endorsed the methodologies described in Nuclear Energy Institute (NEI) 12-06, Revision 0, "Diverse and Flexible Coping Strategies (FLEX) Implementation Guide," to provide an acceptable approach for satisfying the applicable requirements.

The Fermi Unit 3 COLA references the ESBWR passive design features that provide core cooling, containment, and spent fuel pool cooling for 3 days without relying on AC power. The ESBWR design also includes available onsite equipment to maintain required safety functions in the longer term (from 3 to 7 days), which is controlled by RTNSS requirements. To ensure that there is an integrated approach for the mitigation strategies, the staff proposed the following license condition:

At least one (1) year before the latest date set forth in the schedule for completing the inspections, tests, and analyses in the ITAAC submitted in accordance with 10 CFR § 52.99(a), DTE Electric Company shall use the guidance contained in JLD-ISG-2012-01, "Compliance with Order EA-12-049, Order Modifying Licenses with Regard to Requirements for Mitigation Strategies for Beyond-Design-Basis External Events," Revision 0 and the information presented in Fermi FSAR Section 01.05 to complete the development of strategies and guidance for maintaining and, if necessary, restoring core

cooling, containment, and spent fuel pool cooling capabilities beginning 72 hours after loss of all normal and emergency ac power sources, including any alternate ac source under 10 CFR 50.63. These strategies must be capable of:

- Mitigating a simultaneous loss of all ac power sources, both from the onsite and offsite power systems, and loss of normal access to the normal heat sink,
- Maintaining core cooling, containment, and spent fuel pool cooling capabilities for Fermi Unit 3 during and after such an event affecting both Fermi Units 2 and 3, and
- Being implemented in all plant modes.

Before initial fuel load, DTE Electric Company shall fully implement the strategies and guidance required in this license condition, including procedures, training, and acquisition, staging or installing of equipment and consumables relied upon in the strategies.

We concur with this approach. However, we note that the staff is silent about how RTNSS equipment survivability and operability can be assured in the transition phase following an external event that involves beyond-design-basis conditions. This lack of guidance is a generic issue that needs to be clarified not only for this applicant, but also for all currently operating plants and future combined license applicants.

Reliable Spent Fuel Pool Instrumentation

The staff evaluated Fermi Unit 3 proposed spent fuel pool (SFP) level instrumentation with respect to NRC Order EA-12-051. The SFP level instrumentation meets the requirements of NRC Order EA-12-051. DTE will develop operating procedures, testing, and calibration requirements for the installed instrument channels. A proposed license condition ensures that personnel will be trained on how to establish alternate power connections to the level instruments.

Order EA-12-051 also requires that the primary and backup SFP water level instrument channels be reliable at temperature, humidity, and radiation levels consistent with the SFP water at beyond-design-basis accident conditions for an extended period of time. However, while it is clear that saturation temperature and humidity conditions would exist for the SFP, we note that the staff is silent about the actual radiation levels that are required for equipment qualification in beyond-design-basis conditions. This lack of guidance is another generic issue that needs to be clarified not only for this applicant, but also for operating plants and future combined license applicants.

Emergency Preparedness

The Fukushima accident highlighted the need to better determine the levels of plant and offsite staffing needed to respond to a multi-unit event. Additionally, there is a need to ensure that communication equipment has adequate power to coordinate the response to an event during an extended loss of AC power. The applicant proposed and the staff accepted the following license condition related to communications and staffing for emergency planning actions:

Communications:

At least two (2) years prior to scheduled initial fuel load, the licensee shall have performed an assessment of on-site and off-site communications systems and equipment required during an emergency event to ensure communications capabilities can be maintained during prolonged station blackout conditions. The communications capability assessment will be performed in accordance with NEI 12-01, "Guideline for Assessing Beyond Design Basis Accident Response Staffing and Communications Capabilities", Revision 0.

At least one hundred eighty (180) days prior to scheduled initial fuel load, DTE shall complete implementation of corrective actions identified in the communications capability assessment described above, including any related emergency plan and implementing procedure changes and associated training.

Staffing:

At least two (2) years prior to scheduled initial fuel load, the licensee shall have performed assessments of the on-site and augmented staffing capability to satisfy the regulatory requirements for response to a multi-unit event. The staffing assessments will be performed in accordance with NEI 12-01, "Guideline for Assessing Beyond Design Basis Accident Response Staffing and Communications Capabilities", Rev 0.

At least two (2) years prior to scheduled initial fuel load, the licensee shall revise the Fermi 3 Emergency Plan to include the following:

- Incorporation of corrective actions identified in the staffing assessments described above.
- Identification of how the augmented staff will be notified given degraded communications capabilities.

The proposed license condition ensures that communications and staffing will be adequate for emergency planning operations. We concur with this approach.

SUMMARY

There is reasonable assurance that Fermi Unit 3 can be built and operated without undue risk to the health and safety of the public. The Fermi Unit 3 COLA should be approved following its final revision.

Sincerely,

/RA/

John W. Stetkar
Chairman

10. SUPPLEMENTARY NOTES

11. ABSTRACT (200 words or less)

This final safety evaluation report (FSER) documents the U.S. Nuclear Regulatory Commission (NRC) staff's technical review of the combined license (COL) application submitted for the Enrico Fermi Unit 3.

In a letter dated September 18, 2008, DTE Electric Company (DTE, formerly Detroit Edison Company) submitted an application to the NRC for a COL to construct and operate an Economic Simplified Boiling-Water Reactor pursuant to the requirements of Section 103 and 185(b) of the Atomic Energy Act of 1954 as Amended (AEA), Title 10 of the Code of Federal Regulations (10 CFR) Part 52, "Licenses, Certifications and Approval for Nuclear Power Plants," and the associated material licenses under 10 CFR Part 30, "Rules of General Applicability to Domestic Licensing of Byproduct Material"; 10 CFR Part 40, "Domestic Licensing of Source Material"; and 10 CFR Part 70, "Domestic Licensing of Special Nuclear Material." By letter dated December 21, 2012, the Detroit Edison Company informed the NRC that effective January 1, 2013, the name of the company would be changed to "DTE Electric Company." The legal entity remains the same. This reactor will be identified as Fermi 3 and will be located on the existing Fermi site in Monroe County, Michigan.

This FSER presents the results of the staff's review of information submitted in conjunction with the COL application.
